# Package 'ArDec'

February 19, 2015

**Type** Package

**Title** Time series autoregressive-based decomposition

**Version** 2.0

**Date** 2013-05-09

**Author** Susana Barbosa

**Maintainer** Susana Barbosa <sabarbosa@fc.ul.pt>

**Description** Package ArDec implements autoregressive-based
decomposition of a time series based on the constructive
approach in West (1997). Particular cases include the
extraction of trend and seasonal components.

**License** GPL (>= 2)

**NeedsCompilation** no

**Repository** CRAN

**Date/Publication** 2013-05-10 10:03:26

## R topics documented:

---

ardec            *Time series autoregressive decomposition*

---

## Description

Decomposition of a time series into latent subseries from a fitted autoregressive model

1

## Usage

```
ardec(x, coef, ...)
```

## Arguments

| | |
|---|---|
| x | time series |
| coef | autoregressive parameters of AR(p) model |
| ... | additional arguments for specific methods |

## Details

If an observed time series can be adequately described by an (eventually high order) autoregressive AR(p) process, a constructive result (West, 1997) yields a time series decomposition in terms of latent components following either AR(1) or AR(2) processes depending on the eigenvalues of the state evolution matrix.

Complex eigenvalues r exp(iw) correspond to pseudo-periodic oscillations as a damped sine wave with fixed period (2pi/w) and damping factor r. Real eigenvalues correspond to a first order autoregressive process with parameter r.

## Value

A list with components:

| | |
|---|---|
| period | periods of latent components |
| modulus | damping factors of latent components |
| comps | matrix of latent components |

## Author(s)

S. M. Barbosa

## References

## Examples

```
data(tempEng)
coef=ardec.lm(tempEng)$coefficients

# warning: running the next command can be time comsuming!

decomposition=ardec(tempEng,coef)
```

---

ardec.lm                    *Fit an autoregressive model as a linear regression*

---

### Description

Function ardec.lm fits an autoregressive model of order p, AR(p) to a time series through a linear least squares regression.

### Usage

```
ardec.lm(x)
```

### Arguments

x               time series

### Value

For ardec.lm, an object of class "lm".

### Examples

```
data(tempEng)
model=ardec.lm(tempEng)
```

---

ardec.periodic          *Extraction of individual periodic components from a monthly time series*

---

## Description

Function ardec.periodic extracts a periodic component from the autoregressive decomposition of a monthly time series.

## Usage

```
ardec.periodic(x, per, tol = 0.95)
```

## Arguments

| | |
|---|---|
| x | time series |
| per | period of the component to be extracted |
| tol | tolerance for the period of the component |

## Value

A list with components:

| | |
|---|---|
| period | period for the anual component |
| modulus | damping factor for the annual component |
| component | extracted component |

## Author(s)

S. M. Barbosa

## Examples

```
data(tempEng)
ardec.periodic(tempEng,per=12)
```

---

ardec.trend *Estimation of the trend component from a monthly time series*

---

### Description

Function ardec.trend extracts the trend component from the autoregressive decomposition of a monthly time series.

### Usage

```
ardec.trend(x)
```

### Arguments

x                      time series

### Value

A list with components:

modulus           damping factor for the annual component

trend             trend component

### Author(s)

S. M. Barbosa

### Examples

```
data(co2)
ardec.trend(co2)
```

---

tempEng                            *Time series of monthly temperature values*

---

## Description

Monthly temperature in Central England from 1723-1970

## Usage

```
data(tempEng)
```

## Format

Time-Series [1:2976] from 1723 to 1971

## Source

Hipel, K. W. and Mcleod, A. (1994) Time Series Modelling of Water Resources and Environmental Systems, Elsevier

## Examples

```
data(tempEng)
```
