

# Package ‘Julia’

February 19, 2015

**Type** Package

**Title** Fractal Image Data Generator

**Version** 1.1

**Date** 2014-11-25

**Author** Mehmet Suzen [aut, main]

**Maintainer** Mehmet Suzen <mehmet.suzen@physics.org>

**Description** Generates image data for fractals (Julia and Mandelbrot sets) on the complex plane in the given region and resolution.

**License** GPL-3

**LazyLoad** yes

**Repository** CRAN

**NeedsCompilation** no

**Date/Publication** 2014-11-25 12:01:36

## R topics documented:

Julia-package . . . . .	1
JuliaImage . . . . .	3
JuliaIterate . . . . .	5

Julia-package                  *Julia*

---

## Description

Generates image data for fractals (Julia and Mandelbrot sets) on the complex plane in the given region and resolution.

**Details**

Package:	Julia
Type:	Package
Version:	1.1
Date:	2014-11-25
License:	GPL-3
LazyLoad:	yes

## Author(s)

Mehmet Suzen Maintainer: Mehmet Suzen <mehmet.suzen@physics.org>

## References

The Fractal Geometry of Nature, Benoit B. Mandelbrot, W.H.Freeman & Co Ltd (18 Nov 1982)

## See Also

[JuliaIterate](#) and [MandelIterate](#)

## Examples

```
# Julia Set
imageN <- 5;
centre <- -1.0
L <- 2.0
file <- "julia1a.png"
C <- 1-1.6180339887;# Golden Ration
image <- JuliaImage(imageN,centre,L,C);
# writePNG(image,file);# possible visulisation
# Mandelbrot Set
imageN <- 5;
centre <- 0.0
L <- 4.0
file <- "mandelbrot1.png"
image<-MandelImage(imageN,centre,L);
# writePNG(image,file);# possible visulisation
```

## Description

'JuliaImage' returns two dimensional array representing escape values from on the square region in complex plane. Escape values (which measures the number of iteration before the lenght of the complex value reaches to 2).

## Usage

```
JuliaImage(imageN, centre, L, C)
```

## Arguments

imageN	Number of pixels to equally space division of one side if the square region.
centre	A complex number that determines the centre of the square region
L	A side length of the square region on the complex plane.
C	Complex coefficient

## Details

Julia Set is defined as the set of initial complex values where the  $z = z^2 + C$  does not diverge to infinity. C is an arbitrary complex constant that does not change during the iteration by definition.

## Value

It returns a 2D array of real values from 0 to 1. The array corresponds to image on the complex plane.

## Note

Post processing to plot/color mapping of the Julia set for visualisation can be done by using the array generated. See examples to get a png output.

## Author(s)

## Examples

```
# 
# Generating png of the Julia set
# C is 1 minus the golden ratio
#
imageN <- 5;
centre <- 0.0
L <- 4.0
C <- 1-1.6180339887;# Golden Ratio
image <- JuliaImage(imageN,centre,L,C);
#library(png)
#file <- "julia1.png"
```

```
#writePNG(image,file); # possible visulation
#
# Generating png of the Julia set
# different coefficient.
#
imageN <- 5;
centre <- 0.0
L <- 4.0
C <- -0.70176-0.3842i
image <- JuliaImage(imageN,centre,L,C);
#library(png)
#file <- "julia2.png"
#writePNG(image,file); # possible visulation
```

---

*JuliaIterate**JuliaIterate*

---

## Description

'JuliaIterate' returns the number of iteration until a complex value diverges for the Julia map for a give complex number.

## Usage

```
JuliaIterate(z, C)
```

## Arguments

<code>z</code>	A complex coordinate (initial value for the map).
<code>C</code>	A complex constant.

## Details

'JuliaIterate' returns the number of iteration until a complex value diverges for the Julia map for a give complex number.

## Value

Number of iterations.

## Note

Iterative function.

## Author(s)

Mehmet Suzen <mehmet.suzen@physics.org>

## References

## See Also

[JuliaIterate](#) and [MandelIterate](#)

## Examples

```
z<-0+0i
C <- 1-1.6180339887;# Golden Ratio
it<- JuliaIterate(z,C)
```

**MandelImage**

*Mandelbrot Set Generator in a Square Domain*

## Description

'MandelImage' returns two dimensional array representing escape values from on the square region in complex plane. Escape values (which measures the number of iteration before the lenght of the complex value reaches to 2.)

## Usage

```
MandelImage(imageN, centre, L)
```

## Arguments

imageN	Number of pixels to equally space division of one side if the square region.
centre	A complex number that determines the centre of the square region.
L	A side length of the square region on the complex plane.

## Details

Mandelbrot set is defined as the set of initial complex values where the  $z = z^2 + z_0$  does not diverge to infinity. Initial value for the map is taken to be zero and  $z_0$  is the complex coordinate.

## Value

Returns a matrix.

## Note

Returns a matrix

## Author(s)

Mehmet Suzen <mehmet.suzen@physics.org>

## Examples

```
# png image
imageN <- 5;
centre <- 0.0
L <- 4.0
image<-MandelImage(imageN,centre,L);
#file <- "mandelbrot1.png"
# writePNG(image,file); # possible visualisation
# Closer lookup to set
imageN <- 5;
centre <- -0.5
L <- 2.0
image<-MandelImage(imageN,centre,L);
# file <- "mandelbrot.png"
#writePNG(image,file); # possible visualisation
```

MandelIterate

*MandelIterate*

## Description

'MandelIterate' returns the number of iteration until a complex value diverges for the Mandelbrot map for a give complex number.

## Usage

`MandelIterate(z_0)`

## Arguments

<code>z_0</code>	A complex coordinate (constant coefficient value for the map)
------------------	---

## Details

Iterate function.

## Value

Returns an integer

**Note**

Iterate function
