Title Functions for the Nakagami Distribution

Version 1.0.0

Description Density, distribution function, quantile function and random generation for the Nakagami distribution of Nakagami (1960) <doi:10.1016/B978-0-08-009306-2.50005-4>.

Nakagami *The Nakagami Density*

Description

Density, distribution function, quantile function and random generation for the Nakagami distribution with parameters shape and scale.

Usage

```
dnaka(x, shape, scale, log = FALSE)

pnaka(q, shape, scale, lower.tail = TRUE, log.p = FALSE)

qnaka(p, shape, scale, lower.tail = TRUE, log.p = FALSE)

rnaka(n, shape, scale)
```

Arguments

x, q	vector of quantiles.
shape	vector of shape parameters greater than 1/2.
scale	vector of positive scale parameters.
log, log.p	logical; if TRUE, probabilities p are given as log(p).
lower.tail	logical; if TRUE (default), probabilities are $P[X \leq x]$ otherwise, $P[X > x]$.
p	vector of probabilities.
n	number of observations. If length(n) > 1, the length is taken to be the number required.

Details

The Nakagami distribution with shape m and scale Ω has density

$$2m^m/\Gamma(m)\Omega^m x^(2m-1)e^(-m/\Omega x^2)$$

for $x \geq 0$, $m \geq 1/2$ and $\Omega > 0$.

If Y is Gamma distributed with $shape = m$ and $rate = m/\Omega$ then $X = \sqrt{Y}$ is Nakagami distributed with $shape = m$ and $scale = \Omega$.

Value

dnaka gives the density, pnaka gives the distribution function, qnaka gives the quantile function and rnaka generates random deviates.

The length of the result is determined by n for rnaka, and is the maximum of the lengths of the numerical arguments for the other functions.

The numerical arguments other than n are recycled to the length of the result.

The Gamma distribution is closed related to the Nakgami distribution.

`suppress_olw` *Suppress object length incompatibility warnings*

Description

Suppress object length incompatibility warnings

Usage

```
suppress_olw(expr)
```

Arguments

`expr`	expression to be evaluated.
