nse2r	nse2r <i>package</i>
-------	----------------------

Description

Tools for Collecting Real Time Data from National Stock Exchange (India)

nse_advances_declines	<i>Advances & Declines</i>
-----------------------	--------------------------------

Description

NSE indices advances & declines.

Usage

```
nse_advances_declines(clean_names = TRUE)
```

Arguments

clean_names	Logical; if TRUE, makes the column names descriptive and uses snake_case.
-------------	---

Value

A tibble with the following columns:

index_name	Name of the index.
advances	Number of stocks increased (in green).
declines	Number of stocks decreased (in red).
unchanged	Number of stocks unchanged.

Examples

```
nse_advances_declines()

# retain original column names as returned by NSE
nse_advances_declines(clean_names = FALSE)
```

nse_app	<i>Launch shiny app</i>
---------	-------------------------

Description

Launches shiny app for fetching data from NSE.

Usage

```
nse_app()
```

Examples

```
## Not run:
nse_app()

## End(Not run)
```

nse_fo	<i>Top F&O gainers and losers</i>
--------	---------------------------------------

Description

Top futures and options gainers and losers for the last trading session.

Usage

```
nse_fo_top_gainers(clean_names = TRUE)

nse_fo_top_losers(clean_names = TRUE)
```

Arguments

clean_names Logical; if TRUE, makes the column names descriptive and uses snake_case.

Value

A tibble with the following columns:

symbol	NSE ticker.
series	Equity (EQ).
last_corp_announcement_date	Last corporate announcement date.
last_corp_announcement	Last corporate announcement.
open_price	Open price.
high_price	High price.
low_price	Low price.
last_traded_price	Last traded price.
prev_close_price	Previous close price.
percent_change	Percentage change in price.
traded_quantity	Total traded quantity.
turnover	Turnover in lakhs.

Examples

```
# top gainers
nse_fo_top_gainers()

# retain original column names as returned by NSE
nse_fo_top_gainers(clean_names = FALSE)

# top losers
nse_fo_top_losers()

# retain original column names as returned by NSE
nse_fo_top_losers(clean_names = FALSE)
```

nse_index_list

Index list

Description

List NSE indices.

Usage

```
nse_index_list(clean_names = TRUE)
```

Arguments

`clean_names` Logical; if TRUE, makes the column names descriptive and uses snake_case.

Value

A tibble with the following column:

`index_name` Name of the index.

Examples

```
nse_index_list()

# retain original column names as returned by NSE
nse_index_list(clean_names = FALSE)
```

nse_index_quote	<i>Index quote</i>
-----------------	--------------------

Description

Fetch the quote for a given index.

Usage

```
nse_index_quote(clean_names = TRUE)
```

Arguments

`clean_names` Logical; if TRUE, makes the column names descriptive and uses snake_case.

Value

A tibble with the following columns:

`index_name` Name of the NSE indices.

`last_traded_price`
Last traded price.

`change` Change in price.

`percent_change` Percentage change in price.

Examples

```
nse_index_quote()  
  
# retain original column names as returned by NSE  
nse_index_quote(clean_names = FALSE)
```

nse_index_valid	<i>Validate index symbol.</i>
-----------------	-------------------------------

Description

Check if index symbol is valid.

Usage

```
nse_index_valid(index_code)
```

Arguments

index_code Symbol of the index.

Examples

```
nse_index_valid("nifty auto")  
nse_index_valid("nifty cps")
```

nse_stock_code	<i>Stock code</i>
----------------	-------------------

Description

Fetch stock symbol and name from NSE.

Usage

```
nse_stock_code(clean_names = TRUE)
```

Arguments

clean_names Logical; if TRUE, makes the column names descriptive and uses snake_case.

Value

A tibble with the following columns:

symbol	NSE ticker.
company	Name of the firm.

Examples

```
nse_stock_code()

# retain original column names as returned by NSE
nse_stock_code(clean_names = FALSE)
```

nse_stock_high_low	<i>52 week high & low</i>
--------------------	-------------------------------

Description

Fetch stocks that have touched their 52 week high and low.

Usage

```
nse_stock_year_high(clean_names = TRUE)

nse_stock_year_low(clean_names = TRUE)
```

Arguments

clean_names	Logical; if TRUE, makes the column names descriptive and uses snake_case.
-------------	---

Value

A tibble with the following column names:

symbol	NSE ticker.
symbol_desc	Name of the firm.
date	Previous high date.
new_high	New 52 week high price.
new_low	New 52 week low price.
year	Year.
last_traded_price	Last traded price.
prev_high	Previous high price.

prev_low	Previous low price.
prev_close	Previous close price.
change	Change in price.
percent_change	Percentage change in price.

Examples

```
# 52 week high
nse_stock_year_high()

# retain original column names as returned by NSE
nse_stock_year_high(clean_names = FALSE)

# 52 week low
nse_stock_year_low()

# retain original column names as returned by NSE
nse_stock_year_low(clean_names = FALSE)
```

nse_stock_most_traded *Most actively traded stocks*

Description

Fetch most actively traded stocks in a month on NSE.

Usage

```
nse_stock_most_traded(clean_names = TRUE)
```

Arguments

clean_names	Logical; if TRUE, makes the column names descriptive and uses snake_case.
-------------	---

Value

A tibble with the following columns:

security	Name of the firm.
share_turnover	Share in total turnover (percentage).
traded_quantity	Total traded quantity (in lakhs)
no_of_trades	Number of trades.
avg_daily_turnover	Average daily turnover (in crores).
turnover	Turnover (in crores.)

Examples

```
nse_stock_most_traded()

# retain original column names as returned by NSE
nse_stock_most_traded(clean_names = FALSE)
```

nse_stock_quote	<i>Stock quote</i>
-----------------	--------------------

Description

Fetch the quote for a given stock code.

Usage

```
nse_stock_quote(stock_code)
```

Arguments

stock_code Symbol of the stock.

Examples

```
nse_stock_quote("infy")
```

nse_stock_top_base	<i>NSE top gainers & losers</i>
--------------------	-------------------------------------

Description

Fetch top gainers and losers for the last trading session.

Usage

```
nse_stock_top_gainers(clean_names = TRUE)
nse_stock_top_losers(clean_names = TRUE)
```

Arguments

clean_names Logical; if TRUE, makes the column names descriptive and uses snake_case.

Value

A tibble with the following columns:

symbol	NSE ticker.
series	Equity (EQ).
last_corp_announcement_date	Last corporate announcement date.
last_corp_announcement	Last corporate announcement.
open_price	Open price.
high_price	High price.
low_price	Low price.
last_traded_price	Last traded price.
prev_close_price	Previous close price.
percent_change	Percentage change in price.
traded_quantity	Total traded quantity.
turnover	Turnover in lakhs.

Examples

```
# top gainers
nse_stock_top_gainers()

# retain original column names as returned by NSE
nse_stock_top_gainers(clean_names = FALSE)

# top losers
nse_stock_top_losers()

# retain original column names as returned by NSE
nse_stock_top_losers(clean_names = FALSE)
```

nse_stock_valid	<i>Validate stock symbol</i>
-----------------	------------------------------

Description

Check if stock symbol/ticker is valid.

Usage

```
nse_stock_valid(stock_code)
```

Arguments

stock_code Symbol of the stock.

Examples

```
nse_stock_valid("infy")
nse_stock_valid("glo")
```

preopen_nifty	<i>Pre Open market data</i>
---------------	-----------------------------

Description

Fetch data of pre open session of Nifty & Nifty Bank.

Usage

```
nse_preopen_nifty(clean_names = TRUE)
nse_preopen_nifty_bank(clean_names = TRUE)
```

Arguments

clean_names Logical; if TRUE, makes the column names descriptive and uses snake_case.

Value

A tibble with the following columns:

symbol	NSE ticker.
series	Equity (EQ)
corp_action_date	Corporate action date.
corp_action	Corporate Action
price	Price
change	Change in price
percent_change	Percentage change in price.
prev_close	Previous close.
quantity	Quantity

value	Value (in lakhs),
mkt_cap	Free float market capitalization (in crores).
year_high	Normal market 52 week high.
year_low	Normal market 52 week low.

Examples

```
# nifty
nse_preopen_nifty()

# retain original column names as returned by NSE
nse_preopen_nifty(clean_names = FALSE)

# nifty bank
nse_preopen_nifty_bank()

# retain original column names as returned by NSE
nse_preopen_nifty_bank(clean_names = FALSE)
```
