Package ‘ocs4R’

March 9, 2020

Version 0.1

Date 2020-02-22

Title Interface to Open Collaboration Services (OCS) REST API

Maintainer Emmanuel Blondel <emmanuel.blondel1@gmail.com>

Depends R (>= 3.3.0), methods

Imports R6, openssl, curl, httr, jsonlite, XML

Suggests testthat

Description Provides an Interface to Open Collaboration Services 'OCS' (<http://www.open-collaboration-services.org/>) REST API.

`ocs4R` *Interface to 'OCS' REST API*

Description

Provides an Interface to 'OCS' (<http://www.open-collaboration-services.org/>) REST API.

Details

Package:	ocs4R
Type:	Package
Version:	0.1
Date:	2020-02-22
License:	MIT
LazyLoad:	yes

Author(s)

`ocs4RLogger` *ocs4RLogger*

Description

ocs4RLogger

Usage

```
ocs4RLogger
```

Format

`R6Class` object.

Value

Object of `R6Class` for modelling a simple logger

Abstract Methods

`INFO(text)` Logger to report information. Used internally

`WARN(text)` Logger to report warnings. Used internally

`ERROR(text)` Logger to report errors. Used internally

Note

Logger class used internally by ocs4R

`ocsApiSharingManager` *ocsApiSharingManager*

Description

ocsApiSharingManager

Usage

```
ocsApiSharingManager
```

Format

`R6Class` object.

Value

Object of `R6Class` for modelling an ocsManager for the Sharing API

General Methods (inherited from ’ocsManager’)

`new(url, user, pwd, logger)` This method is used to instantiate an ocsApiSharingManager. The user/pwd are mandatory in order to connect to ’ocs’. The logger can be either NULL, "INFO" (with minimum logs), or "DEBUG" (for complete curl http calls logs)

`connect()` A method to connect to ’ocs’ and set version/capabilities

`getVersion()` Get the ’ocs’ server version

`getCapabilities()` Get the ’ocs’ server capabilities

’OCS’ Share API methods

`getShares(path, reshares, shared_with_me, state, subfiles, pretty)` Get list of shares as `list`. To return as `data.frame`, set `pretty = TRUE`. The method accepts additional parameters.

`createShare(path, name, shareType, shareWith, publicUpload, password, permissions = NULL, expireDate = NU`
: Creates a share for the path (file or folder), given a name. The `shareType` should be among values 'user','group','publiclink' or 'federated'.The `shareWith` is required for `shareType` 'user' and 'group' and corresponds to the username or groupname. The `permissions` can be set among values 'read', 'update', 'create', 'delete', 'read-write', 'share', 'all'. By default the permissions will be the default permissions set by the ocs server (by default 'all').

`shareWithUser(path, name, username, permissions, pretty)` Shares a resource (file or folder) with a user given its username handled with argument `username`. The `permissions` can be set among values 'read', 'update', 'create', 'delete', 'read-write', 'share', 'all'. By default the permissions will be the default permissions set by the ocs server (by default 'all'). Returns the share properties as `list` (or as`data.frame` if `pretty` is set to TRUE).

`shareWithGroup(path, name, group, permissions, pretty)` Shares a resource (file or folder) with a group given its name handled with argument `group`. The `permissions` can be set among values 'read', 'update', 'create', 'delete', 'read-write', 'share', 'all'. By default the permissions will be the default permissions set by the ocs server (by default 'all'). Returns the share properties as `list` (or as`data.frame` if `pretty` is set to TRUE).

`shareAsPublicLink(path, name, publicUpload, password, permissions, expireDate)` Shares a resource (file or folder) as public link. The function returns the public link generated by ocs.

Author(s)

Emmanuel Blondel <emmanuel.blondel1@gmail.com>

`ocsApiUserProvisioningManager` *ocsApiUserProvisioningManager*

Description

ocsApiUserProvisioningManager

Usage

```
ocsApiUserProvisioningManager
```

Format

`R6Class` object.

Value

Object of `R6Class` for modelling an ocsManager for Webdav API

General Methods (inherited from 'ocsManager')

`new(url, user, pwd, logger)` This method is used to instantiate an ocsApiUserProvisioning-Manager. The user/pwd are mandatory in order to connect to 'ocs'. The logger can be either NULL, "INFO" (with minimum logs), or "DEBUG" (for complete curl http calls logs)

`connect()` A method to connect to 'ocs' and set version/capabilities

`getVersion()` Get the 'ocs' server version

`getCapabilities()` Get the 'ocs' server capabilities

User Provisioning API methods

`addUser(userid, email, password, groups)` Adds a user given a `userid` (required). All other fields (email, password, groups) are optional for the user creation. Returns `TRUE` if the user is added, `FALSE` otherwise.

`getUsers()` Get the list of users. This method returns a vector of class 'character' giving the user IDs available in the OCS cloud plateform.

`getUser(userid, pretty)` Get the user details from its `userid`. If the argument `pretty` is set to TRUE, this will return an object of class `data.frame`, otherwise (by default) it returns an object of class `list`.

`editUser(userid, key, value)` Edits a user, identifier by a userid. The user property to be edited should be set using its key (eg display) and the value to be modified for this key. Returns `TRUE` if the user is edited, `FALSE` otherwise.

`editUserDisplayName(userid, displayName)` Edits a user display name.

`editUserEmail(userid, email)` Edits a user email.

`editUserPassword(userid, password)` Edits a user password.

`editUserQuota(userid, quota)` Edits a user quota.

`enableUser(userid)` Enables a user. Returns `TRUE` if enabled.

`disableUser(userid)` Disables a user. Returns `TRUE` if disabled.

`deleteUser(userid)` Deletes a user. Returns `TRUE` if deleted.

`getUserGroups(userid)` Get user group(s). This method returns a vector of class 'character' giving the usergroups IDs

codeaddToGroup(userid, groupid) Adds a user to a group.

`removeFromGroup(userid, groupid)` Removes a user from a group.

`getGroups(search, limit, offset)` Get the list of groups. This method returns a vector of class 'character' giving the usergroups IDs

`getGroup(groupid)` Get the group including member users from its `groupid`.

`addGroup(groupid)` Add group given a `groupid` (required).

`deleteGroup(groupid)` Deletes a group. Returns `TRUE` if deleted.

`ocsApiWebdavManager` *ocsApiWebdavManager*

Description

ocsApiWebdavManager

Usage

```
ocsApiWebdavManager
```

Format

`R6Class` object.

Value

Object of `R6Class` for modelling an ocsManager for Webdav API

General Methods (inherited from 'ocsManager')

`new(url, user, pwd, logger)` This method is used to instantiate an ocsApiWebdavManager. The user/pwd are mandatory in order to connect to 'ocs'. The logger can be either NULL, "INFO" (with minimum logs), or "DEBUG" (for complete curl http calls logs)

`connect()` A method to connect to 'ocs' and set version/capabilities

`getVersion()` Get the 'ocs' server version

`getCapabilities()` Get the 'ocs' server capabilities

WebDAV methods

`getWebdavRoot()` Get the 'ocs' WebDAV root URL

`listFiles(relPath)` WebDAV method to list folders/files given a relative path. The relative path is set to `"/"` by default, which corresponds to the root of the 'ocs' repository.

`makeCollection(name, relPath)` WebDAV method to make a collection. By default `relPath` is set to `"/"` (root). The `name` is the name of the new collection to be created. The function is recursive in the sense that a `name` can be provided as relative path of a collection tree (eg `newfolder1/newfolder2/newfolder3`), the function will create recursively as many collections are handled in the name.

`uploadFile(filename, relPath)` WebDAV method to upload a file. By default `relPath` is set to `"/"` (root).

`ocsManager` *ocsManager*

Description

ocsManager

Usage

```
ocsManager
```

Format

`R6Class` object.

Value

Object of `R6Class` for modelling an ocsManager

General Methods

`new(url, user, pwd, logger)` This method is used to instantiate an ocsManager. The user/pwd are mandatory in order to connect to 'ocs'. The logger can be either NULL, "INFO" (with minimum logs), or "DEBUG" (for complete curl http calls logs)

`connect()` A method to connect to 'ocs' and set version/capabilities

`getVersion()` Get the 'ocs' server version

`getCapabilities()` Get the 'ocs' server capabilities

`getWebdavRoot()` Get the 'ocs' WebDAV root URL

WebDAV methods

`listFiles(relPath)` WebDAV method to list folders/files given a relative path. The relative path is set to `"/"` by default, which corresponds to the root of the 'ocs' repository.

`makeCollection(name, relPath)` WebDAV method to make a collection. By default `relPath` is set to `"/"` (root). The `name` is the name of the new collection to be created. The function is recursive in the sense that a `name` can be provided as relative path of a collection tree (eg `newfolder1/newfolder2/newfolder3`), the function will create recursively as many collections are handled in the name.

`uploadFile(filename, relPath)` WebDAV method to upload a file. By default `relPath` is set to `"/"` (root).

'OCS' Share API methods

`getShares(path, reshares, shared_with_me, state, subfiles, pretty)` Get list of shares as `list`. To return as `data.frame`, set `pretty = TRUE`. The method accepts additional parameters.

`createShare(path, name, shareType, shareWith, publicUpload, password, permissions = NULL, expireDate = NU`
Creates a share for the path (file or folder), given a name. The `shareType` should be among values 'user','group','publiclink' or 'federated'.The `shareWith` is required for `shareType` 'user' and 'group' and corresponds to the username or groupname. The `permissions` can be set among values 'read', 'update', 'create', 'delete', 'read-write', 'share', 'all'. By default the permissions will be the default permissions set by the ocs server (by default 'all').

`shareWithUser(path, name, username, permissions, pretty)` Shares a resource (file or folder) with a user given its username handled with argument `username`. The `permissions` can be set among values 'read', 'update', 'create', 'delete', 'read-write', 'share', 'all'. By default the permissions will be the default permissions set by the ocs server (by default 'all'). Returns the share properties as `list` (or as`data.frame` if `pretty` is set to TRUE).

`shareWithGroup(path, name, group, permissions, pretty)` Shares a resource (file or folder) with a group given its name handled with argument `group`. The `permissions` can be set among values 'read', 'update', 'create', 'delete', 'read-write', 'share', 'all'. By default the permissions will be the default permissions set by the ocs server (by default 'all'). Returns the share properties as `list` (or as`data.frame` if `pretty` is set to TRUE).

`shareAsPublicLink(path, name, publicUpload, password, permissions, expireDate)` Shares a resource (file or folder) as public link. The function returns the public link generated by ocs.

Examples

```
## Not run:
   #Not Run:
   #Connect to an OCS API
   OCS <- ocsManager$new(url = ocs_url, user = ocs_user, pwd = ocs_pwd, logger = "DEBUG")
   version <- OCS$getVersion()
   caps <- OCS$getCapabilities()

   #OCS User Provisioning API
   #-------------------------------------
   #users
   users <- OCS$getUsers() #get users
   user <- OCS$getUser("admin") #get a user
   user.df <- OCS$getUser("admin", TRUE) #the same user as data.frame
   added <- OCS$addUser("john.doe", password = "ocs4john") #add a user
   disabled <- OCS$disableUser("john.doe") #disable a user
   enabled <- OCS$enableUser("john.doe") #enable auser
   edited <- OCS$editUser("john.doe", key = "display", value = "John Doe") #edit user
   #edit some user field
   edited2 <- OCS$editUserDisplayName("john.doe", displayName = "John Doe Jr.")
   deleted <- OCS$deleteUser("john.doe")
```

```
    #groups
    admingroups <- OCS$getUserGroups("admin")
    groups <- OCS$getGroups()
    added <- OCS$addGroup("scientists") #add a new group
    sc_group <- OCS$getGroup("scientists") #get group details
    added <- OCS$addToGroup("john.doe", "scientists") #add user to group
    removed <- OCS$removeFromGroup("john.doe", "scientists") #remove user from group
    deleted <- OCS$deleteGroup("scientists")

    #OCS Webdav API
    #-------------------------------------
    #list files
    files <- OCS$listFiles()
    subfiles <- OCS$listFiles("Documents")
    #make collection
    OCS$makeCollection("myfolder")
    subfiles <- OCS$listFiles("myfolder")
    #upload a file?
    filename <- "magic.txt"
    file.create(filename); writeLines("ocs4R is great", filename)
    #we upload the file in 'Documents' folder
    OCS$uploadFile(filename, "/Documents")
    #check if file is uploaded
    OCS$listFiles('Documents')

    #OCS Sharing API
    #-------------------------------------
    #let's add a user with User provisioning API
    added <- OCS$addUser("john.doe", password = "ocs4john") #add a user
    #let's share the previously uploaded file with John Doe
    OCS$shareWithUser("/Documents", filename, "john.doe")

## End(Not run)
```

ocsRequest *ocsRequest*

Description

ocsRequest

Usage

```
ocsRequest
```

Format

`R6Class` object.

Value

Object of `R6Class` for modelling a generic 'ocs' web-service request

Methods

`new(type, url, request, user, pwd, logger)` This method is used to instantiate a object for doing an 'ocs' web-service request

`getRequest()` Get the request payload

`getRequestHeaders()` Get the request headers

`getStatus()` Get the request status code

`getResponse()` Get the request response

`getException()` Get the exception (in case of request failure)

`getResult()` Get the result `TRUE` if the request is successful, `FALSE` otherwise

Note

Abstract class used internally by **ocs4R**
