

# Package ‘opalr’

June 8, 2020

**Version** 1.4.1

**Title** 'Opal' Data Repository Client and 'DataSHIELD' Utils

**Depends** R (>= 3.1), httr

**Imports** xml2, jsonlite, mime, progress

**Suggests** e1071, knitr, knitrBootstrap, rmarkdown, tibble, testthat

**Description** Data integration Web application for biobanks by 'OBiBa'. 'Opal' is the core database application for biobanks. Participant data, once collected from any data source, must be integrated and stored in a central data repository under a uniform model. 'Opal' is such a central repository. It can import, process, validate, query, analyze, report, and export data. 'Opal' is typically used in a research center to analyze the data acquired at assessment centres. Its ultimate purpose is to achieve seamless data-sharing among biobanks. This 'Opal' client allows to interact with 'Opal' web services and to perform operations on the R server side. 'DataSHIELD' administration tools are also provided.
