

Package ‘polite’

November 30, 2019

Version 0.1.1

Title Be Nice on the Web

Description Be responsible when scraping data from websites by following polite principles: introduce yourself, ask for permission, take slowly and never ask twice.

License MIT + file LICENSE

Encoding UTF-8

LazyData true

ByteCompile true

URL <https://github.com/dmi3kno/polite>

BugReports <https://github.com/dmi3kno/polite/issues>

RoxygenNote 6.1.1

Imports here, httr, magrittr, memoise, ratelimitr, robotstxt, rvest, stats, usethis

Suggests dplyr, testthat, covr

NeedsCompilation no

R topics documented:

bow	2
html_attrs_dfr	3
nod	4
print.polite	4
rip	5
scrape	6
set_scrape_delay	6
use_manners	7

Index	8
--------------	----------

`bow`*Introduce yourself to the host*

Description

Introduce yourself to the host

Usage

```
bow(url,  
    user_agent = "polite R package - https://github.com/dmi3kno/polite",  
    delay = 5, force = FALSE, verbose = FALSE, ...)  
  
is.polite(x)
```

Arguments

<code>url</code>	URL
<code>user_agent</code>	character value passed to user agent string
<code>delay</code>	desired delay between scraping attempts. Final value will be the maximum of desired and mandated delay, as stipulated by <code>robots.txt</code> for relevant user agent
<code>force</code>	refresh all memoised functions. Clears up <code>robotstxt</code> and scrape caches. Default is FALSE
<code>verbose</code>	TRUE/FALSE
<code>...</code>	other curl parameters wrapped into <code>httr::config</code> function
<code>x</code>	object of class <code>polite</code> , <code>session</code>

Value

object of class `polite`, `session`

Examples

```
library(polite)  
  
host <- "https://www.cheese.com"  
session <- bow(host)  
session
```

html_attrs_dfr	<i>Convert collection of html nodes into data frame</i>
----------------	---

Description

Convert collection of html nodes into data frame

Usage

```
html_attrs_dfr(x, attrs = NULL, trim = FALSE,  
              defaults = NA_character_, add_text = TRUE)
```

Arguments

x	xml_nodeset object, containing text and attributes of interest
attrs	character vector of attribute names. If missing, all attributes will be used
trim	if TRUE, will trim leading and trailing spaces
defaults	character vector of default values to be passed to <code>rvest::html_attr()</code> . Recycled to match length of <code>attrs</code>
add_text	if TRUE, node content will be added as <code>.text</code> column (using <code>rvest::html_text</code>)

Value

data frame with one row per xml node, consisting of an `html_text` column with text and additional columns with attributes

Examples

```
library(polite)  
library(rvest)  
bow("https://en.wikipedia.org/wiki/List_of_cognitive_biases") %>%  
  scrape() %>%  
  html_nodes("tr td:nth-child(1) a") %>%  
  html_attrs_dfr()
```

nod *Agree modification of session path with the host*

Description

Agree modification of session path with the host

Usage

```
nod(bow, path, verbose = FALSE)
```

Arguments

bow	object of class polite, session created by polite::bow()
path	string value of path/URL to follow. The function accepts either a path (string part of URL following domain name) or a full URL
verbose	TRUE/FALSE

Value

object of class polite, session with modified URL

Examples

```
library(polite)

host <- "https://www.cheese.com"
session <- bow(host) %>%
  nod(path="by_type")
session
```

print.polite *Print host introduction object*

Description

Print host introduction object

Usage

```
## S3 method for class 'polite'
print(x, ...)
```

Arguments

x object of class polite, session
 ... other parameters passed to methods

rip *Polite file download*

Description

Polite file download

Usage

```
rip(bow, destfile = NULL, ..., mode = "wb", path = tempdir(),
    overwrite = FALSE)
```

Arguments

bow host introduction object of class polite, session created by bow() or nod()
 destfile optional new file name to use when saving the file. If missing, it will be guessed from 'basename(url)'
 ... other parameters passed to download.file
 mode character. The mode with which to write the file. Useful values are w, wb (binary), a (append) and ab. Not used for methods wget and curl.
 path character. Path where to save the destfile. By default is temporary directory created with tempdir() Ignored if destfile contains path along with filename.
 overwrite if TRUE will overwrite file on disk

Value

Full path to the locally saved file indicated by the user in destfile (and path)

Examples

```
bow("https://www.cheese.com/") %>%
  nod("media/img/sub-page-slide2.jpg") %>%
  rip()
```

scrape	<i>Scrape the content of authorized page/API</i>
--------	--

Description

Scrape the content of authorized page/API

Usage

```
scrape(bow, query = NULL, params = NULL, accept = "html",
       content = NULL, verbose = FALSE)
```

Arguments

bow	host introduction object of class <code>polite</code> , session created by <code>bow()</code> or <code>nod()</code>
query	named list of parameters to be appended to URL in the format <code>list(param1=valA,param2=valB)</code>
params	deprecated. Use query argument above.
accept	character value of expected data type to be returned by host (e.g. <code>html</code> , <code>json</code> , <code>xml</code> , <code>csv</code> , <code>txt</code> , etc.)
content	MIME type (aka internet media type) used to override the content type returned by the server. See http://en.wikipedia.org/wiki/Internet_media_type for a list of common types. You can add the <code>charset</code> parameter to override the server's default encoding
verbose	extra feedback from the function. Defaults to <code>FALSE</code>

Value

Object of class `httr::response` which can be further processed by functions in `rvest` package

set_scrape_delay	<i>Reset scraping/ripping rate limit</i>
------------------	--

Description

Reset scraping/ripping rate limit

Usage

```
set_scrape_delay(delay)

set_rip_delay(delay)
```

Arguments

delay Delay between subsequent requests. Default for package is 5 sec. It can be set lower only under the condition of specifying a custom user-agent string.

Value

Updates rate-limit property of scrape and rip functions, respectively.

Examples

```
library(polite)

host <- "https://www.cheese.com"
session <- bow(host)
session
```

use_manners

Use manners in your own package or script

Description

Creates collection of polite functions for scraping and downloading

Usage

```
use_manners(save_as = "R/polite-scrape.R", open = TRUE)
```

Arguments

save_as File where function should be created Defaults to "R/polite-scrape.R"

open if TRUE, open the resultant files
