

Package ‘rFDSN’

February 20, 2015

Type Package

Title Get Seismic Data from the International Federation of Digital Seismograph Networks

Description This package facilitates searching for and downloading seismic time series in miniSEED format (a minimalist version of the Standard for the Exchange of Earthquake Data) from International Federation of Digital Seismograph Networks repositories. This package can also be used to gather information about seismic networks (stations, channels, locations, etc) and find historical earthquake data (origins, magnitudes, etc).

Version 0.0.0

Date 2014-09-28

Depends R (>= 3.1.1), XML (>= 3.98.1.1)

Enhances RSEIS (>= 3.3.3)

License GPL (>= 3)

Maintainer Daniel C. Bowman <daniel.bowman@unc.edu>

rFDSN-package	<i>Get seismic data from the International Federation of Digital Seismograph Networks</i>
---------------	---

Description

Gather information about seismic networks (stations, channels, locations, etc), download seismic time series in miniseed format, and find historical earthquake data (origins, magnitudes, etc).

Details

Package:	rFDSN
Type:	Package
Version:	0.0.0

```

FDSNGetEvents*Download earthquake data from FDSN.***Description**

This function gathers earthquake data from the International Federation of Digital Seismograph Networks. The available subsetting parameters can be viewed by calling [FDSNParameterList](#).

Usage

```
FDSNGetEvents(base.url, parameters, verbose = TRUE)
```

Arguments

<code>base.url</code>	The address of a FDSN server.
<code>parameters</code>	Selection parameters to subset results, see FDSNParameterList for available inputs and examples below for usage.
<code>verbose</code>	If TRUE, print the URL used to gather the earthquake data. Default TRUE.

Value

<code>event</code>	A structure with event location and magnitude information
--------------------	---

## End(Not run)
```

FDSNGetNetworks

Download network and station data from FDSN.

Description

This function gathers information about stations and networks from the International Federation of Digital Seismograph Networks. The available subsetting parameters can be viewed by calling [FDSNParameterList](#).

Usage

```
FDSNGetNetworks(base.url, parameters, verbose = TRUE)
```

Arguments

base.url The address of a FDSN server.

parameters	Selection parameters to subset results, see FDSNParameterList for available inputs and examples below for usage.
verbose	If TRUE, print the URL used to gather the station and network. Default TRUE.

Value

network	A structure with seismic network information
---------	--

FDSNGetTimeSeries *Download sensor time series from FDSN.*

Description

This function gathers earthquake data from the International Federation of Digital Seismograph Networks in miniseed format. The available subsetting parameters can be viewed by calling [FDSNParameterList](#).

Usage

```
FDSNGetTimeSeries(base.url, parameters, save.file = "result.mseed",
                  save.dir = ".", verbose = TRUE)
```

Arguments

base.url	The address of a FDSN server.
parameters	Time series selection parameters, see FDSNParameterList for available inputs and examples below for usage.
save.file	What name to give the miniseed file when it has been downloaded.
save.dir	Where to save the miniseed file, defaults to the current directory.
verbose	If TRUE, download progress is displayed.

Value

file.name	The location of the downloaded file
-----------	-------------------------------------

)
miniseed.file <- FDSNGetTimeSeries(base.url, parameters, save.file = "Y22D_BDF.mseed")

## End(Not run)
```

Description

A list and description of subset options for [FDSNGetEvents](#), [FDSNGetNetworks](#), and [FDSNGetTimeSeries](#).

Usage

```
FDSNParameterList(interface)
```

Arguments

interface	Whether to show parameter list for "station", "datalog" or "event".
-----------	---

Value

parameters	A list describing the parameters available for data subsetting through FDSN
------------	---

Author(s)

Daniel C. Bowman <daniel.bowman@unc.edu>
