

Package ‘rdwd’

August 2, 2020

Title Select and Download Climate Data from 'DWD' (German Weather Service)

Version 1.4.0

Date 2020-07-31

Depends R(>= 2.10)

Imports berryFunctions (>= 1.18.19), pbapply

Suggests RCurl, leaflet, knitr, rmarkdown, testthat, roxygen2, devtools, remotes, bit64, data.table, OSMscale, raster, R.utils, ncdf4, readr, dwdradar, XML, sp

Author Berry Boessenkool

Maintainer Berry Boessenkool <berry-b@gmx.de>

Description Handle climate data from the 'DWD' ('Deutscher Wetterdienst', see <https://www.dwd.de/EN/climate_environment/cdc/cdc.html> for more information). Choose observational time series from meteorological stations with 'selectDWD()'. Find raster data from radar and interpolation according to <<https://bookdown.org/brry/rdwd/raster-data.html>>. Download (multiple) data sets with progress bars and no re-downloads through 'dataDWD()'. Read both tabular observational data and binary gridded datasets with 'readDWD()'.

License GPL (>= 2)

Encoding UTF-8

addBorders *add country and Bundesland borders to a map*

Description

add country and Bundesland borders to a map

Usage

```
addBorders(de = "grey80", eu = "black", add = TRUE, ...)
```

Arguments

de	Color for Bundeslaender line (DEU). NA to suppress. DEFAULT: "grey80"
eu	Color for countries line (EUR). NA to suppress. DEFAULT: "black"
add	Logical: add to existing plot? DEFAULT: TRUE
...	Further arguments passed to raster::plot()

Value

invisible list with DEU and EUR

Author(s)

Berry Boessenkool, <berry-b@gmx.de>, Aug 2019

See Also

[plotRadar](#), [DEU](#), [EUR](#)

Examples

```
if(requireNamespace("raster", quietly=TRUE)){  
  plot(1, xlim=c(2,16), ylim=c(47,55))  
  addBorders()  
  plot(1, xlim=c(2,16), ylim=c(47,55))  
  addBorders(de="orange", eu=NA)  
}
```

`checkIndex`*check indexes*

Description

check indexes. Mainly for internal usage in `createIndex()`. Not exported, so call it as `rdwd:::checkIndex()` if you want to run tests yourself. Further test suggestions are welcome!

Usage

```
checkIndex(  
  findex = NULL,  
  mindex = NULL,  
  gindex = NULL,  
  excludefp = TRUE,  
  fast = FALSE,  
  warn = !quiet,  
  logfile = localtestdir(".", "misc/ExampleTests/warnings.txt"),  
  quiet = rdwdquiet()  
)
```

Arguments

<code>findex</code>	<code>fileIndex</code> . DEFAULT: NULL
<code>mindex</code>	<code>metaIndex</code> . DEFAULT: NULL
<code>gindex</code>	<code>geoIndex</code> . DEFAULT: NULL
<code>excludefp</code>	Exclude false positives from <code>geoIndex</code> coordinate check results? DEFAULT: TRUE
<code>fast</code>	Exclude the 3-minute location per ID check? DEFAULT: FALSE
<code>warn</code>	Warn about issues? DEFAULT: !quiet (TRUE)
<code>logfile</code>	File to copy log to, appended to existing content. NULL to suppress. DEFAULT: "misc/ExampleTests/warnings.txt"
<code>quiet</code>	Logical: Suppress progress messages? DEFAULT: FALSE through <code>rdwdquiet()</code>

Value

Charstring with issues (if any) to be printed with `cat()`.

Author(s)

Berry Boessenkool, <berry-b@gmx.de>, May 2019

See Also

[createIndex](#)

Examples

```
data(fileIndex) ; data(metaIndex) ; data(geoIndex)
# ci <- rdwd:::checkIndex(findex=fileIndex, mindex=metaIndex, gindex=geoIndex)
# cat(ci)
```

checkSuggestedPackage *check suggested package for availability*

Description

check suggested package for availability, yielding an instructive error message if not

Usage

```
checkSuggestedPackage(package, functionname)
```

Arguments

package Charstring: package to be checked for loadability
functionname Charstring: function name to be used in the message

Value

invisible success logical value from [requireNamespace\(\)](#)

Author(s)

Berry Boessenkool, <berry-b@gmx.de>, Aug 2019

See Also

[requireNamespace\(\)](#)

createIndex *Create file and meta index of the DWD CDC FTP Server*

Description

This is mainly an internal function. Create data.frames out of the vector index returned by [indexFTP\(\)](#). For [fileIndex](#) (the first output element) createIndex tries to obtain res, var, per, file, id, start and end from the paths. If meta=TRUE, [metaIndex](#) and [geoIndex](#) are also created. They combine all Beschreibung files into a single data.frame. If you create your own index as suggested in selectDWD (argument findex), you can read the produced file as shown in the example section.

Usage

```

createIndex(
  paths,
  base = dwdbase,
  dir = "DWDdata",
  fname = "fileIndex.txt",
  meta = FALSE,
  metadir = "meta",
  mname = "metaIndex.txt",
  gname = "geoIndex.txt",
  overwrite = FALSE,
  checkwarn = TRUE,
  checklog = tempfile(),
  quiet = rdwdquiet(),
  ...
)

```

Arguments

paths	Char: vector of DWD paths returned by indexFTP() called with the same base value as this function
base	Main directory of DWD ftp server, defaulting to observed climatic records. DEFAULT: dwdbase
dir	Char: writeable directory name where to save the main output(s). Created if not existent. DEFAULT: "DWDdata" at current getwd()
fname	Char: Name of file in dir in which to write fileIndex . Use fname="" to suppress writing. DEFAULT: "fileIndex.txt"
meta	Logical: should metaIndex also be created from fileIndex? Uses dataDWD() to download files if not present. DEFAULT: FALSE
metadir	Char: Directory (subfolder of dir) where original description files are downloaded to if meta=TRUE. Passed to dataDWD() . "" to write in dir. DEFAULT: "meta"
mname	Char: Name of file in dir (not metadir) in which to write metaIndex . Use mname="" to suppress writing. DEFAULT: "metaIndex.txt"
gname	Filename for geoIndex . DEFAULT: "geoIndex.txt"
overwrite	Logical: Overwrite existing fname / mname / gname files? If not, "_n" is added to the filenames, see berryFunctions::newFilename() . DEFAULT: FALSE
checkwarn	Logical: warn about checkIndex() issues? DEFAULT: TRUE
checklog	Logfile for checkIndex() . DEFAULT: tempfile()
quiet	Logical: Suppress messages about progress and filenames? DEFAULT: FALSE through rdwdquiet()
...	Further arguments passed to dataDWD() for the meta part.

Value

invisible data.frame (or if meta=TRUE, list with two data.frames) with a number of columns inferred from the paths. Each is also written to disc.

Author(s)

Berry Boessenkool, <berry-b@gmx.de>, Oct-Nov 2016, June 2017

Examples

```
## Not run: # Not tested with R CMD check because of file writing
link <- "daily/kl/historical/tageswerte_00699_19490101_19580630_hist.zip"
ind <- createIndex(link, dir=tempdir())
ind
link2 <- "daily/kl/historical/KL_Tageswerte_Beschreibung_Stationen.txt"
link3 <- "daily/kl/recent/KL_Tageswerte_Beschreibung_Stationen.txt"
ind2 <- createIndex(c(link,link2,link3), dir=tempdir(), meta=TRUE, checkwarn=FALSE)
lapply(ind2, head)

## End(Not run)
```

dataDWD

Download data from the DWD CDC FTP Server

Description

Get climate data from the German Weather Service (DWD) FTP-server. The desired dataset is downloaded into dir. If read=TRUE, it is also read and processed.

dataDWD handles vectors of URLs, displays progress bars (if the package pbapply is available) and by default does not re-download data already in dir (but see argument force to update files).

To solve "errors in download.file: cannot open URL", see <https://bookdown.org/brry/rdwd/fileindex.html>.

Usage

```
dataDWD(  
  url,  
  base = dwdbase,  
  joinbf = FALSE,  
  dir = "DWDdata",  
  force = FALSE,  
  overwrite = FALSE,
```

```

    read = TRUE,
    dbin = FALSE,
    dfargs = NULL,
    sleep = 0,
    progbar = !quiet,
    browse = FALSE,
    ntrunc = 2,
    file = NULL,
    quiet = rdwdquiet(),
    ...
)

```

Arguments

url	Char (vector): complete file URL(s) (including base and filename.zip) as returned by <code>selectDWD()</code> . Can be a vector with several FTP URLs.
base	Single char: base URL that will be removed from output file names. DEFAULT: <code>dwdbase</code>
joinbf	Logical: paste base and file url together? Needed mostly for data at <code>gridbase</code> . DEFAULT: FALSE (selectDWD returns complete URLs already)
dir	Char: Writeable directory name where to save the downloaded file. Created if not existent. DEFAULT: "DWDdata" at current <code>getwd()</code>
force	Logical (vector): always download, even if the file already exists in dir? Use NA to force re-downloading files older than 24 hours. Use a numerical value to force after that amount of hours. Note: if <code>force!=FALSE</code> , you might want to set <code>overwrite=TRUE</code> as well. If <code>force=FALSE</code> , the file is still read (or name returned). DEFAULT: FALSE
overwrite	Logical (vector): if <code>force=TRUE</code> , overwrite the existing file rather than append "_1"/"_2" etc to the filename? DEFAULT: FALSE
read	Logical: read the file(s) with <code>readDWD()</code> ? If FALSE, only download is performed and the filename(s) returned. DEFAULT: TRUE
dbin	Logical: Download binary file, i.e. add mode="wb" to the <code>download.file()</code> call? This is needed for .tar files (see <code>readDWD.asc()</code>) and binary files like those at <code>weather/radar/radolan</code> . This seems to be a CRLF issue on MS Windows. DEFAULT: FALSE
dfargs	Named list of additional arguments passed to <code>download.file()</code> Note that mode="wb" is already passed if <code>dbin=TRUE</code>
sleep	Number. If not 0, a random number of seconds between 0 and sleep is passed to <code>Sys.sleep()</code> after each download to avoid getting kicked off the FTP-Server, see note in <code>indexFTP()</code> . DEFAULT: 0
progbar	Logical: present a progress bar with estimated remaining time? If missing and <code>length(file)==1</code> , progbar is internally set to FALSE. Only works if the R package pbapply is available. DEFAULT: TRUE (!quiet)
browse	Logical: open repository via <code>browseURL()</code> and return URL folder path? If TRUE, no data is downloaded. If file has several values, only unique folders will be opened. DEFAULT: FALSE

ntrunc	Single integer: number of filenames printed in messages before they get truncated with message "(and xx more)". DEFAULT: 2
file	Deprecated since rdwd version 1.3.34, 2020-07-28.
quiet	Logical: suppress message about directory / filenames? DEFAULT: FALSE through <code>rdwdquiet()</code>
...	Further arguments passed to <code>readDWD()</code> , like <code>fread</code> , <code>varnames</code> etc. Dots were passed to <code>download.file()</code> prior to rdwd 0.11.7 (2019-02-25)

Value

Presuming downloading and processing were successful: if `read=TRUE`, the desired dataset (as returned by `readDWD()`), otherwise the filename as saved on disc (may have "_n" appended in name, see `newFilename()`).

If `length(file)>1`, the output is a list of outputs / vector of filenames.

The output is always invisible.

See Also

`selectDWD()`, `readDWD()`, `download.file()`.

<https://bookdown.org/brry/rdwd>

Helpful for plotting: `berryFunctions::monthAxis()`, see also `berryFunctions::climateGraph()`

Examples

```
## Not run: ## requires internet connection
# find FTP files for a given station name and file path:
link <- selectDWD("Fuerstenzell", res="hourly", var="wind", per="recent")
# download file:
fname <- dataDWD(link, dir=tempdir(), read=FALSE) ; fname
# dir="DWDdata" is the default directory to store files
# unless force=TRUE, already obtained files will not be downloaded again

# read and plot file:
wind <- readDWD(fname, varnames=TRUE) ; head(wind)
metafiles <- readMeta(fname) ; str(metafiles, max.level=1)
column_names <- readVars(fname) ; head(column_names)

plot(wind$MESS_DATUM, wind$F, main="DWD hourly wind Fuerstenzell", col="blue",
     xaxt="n", las=1, type="l", xlab="Date", ylab="Hourly Wind speed [m/s]")
berryFunctions::monthAxis(1)

# current and historical files:
link <- selectDWD("Potsdam", res="daily", var="kl", per="hr"); link
potsdam <- dataDWD(link, dir=tempdir())
potsdam <- do.call(rbind, potsdam) # this will partly overlap in time
```

```
plot(TMK-MESS_DATUM, data=tail(potsdam,1500), type="l")
# The straight line marks the jump back in time
# Keep only historical data in the overlap time period:
potsdam <- potsdam[!duplicated(potsdam$MESS_DATUM),]

# With many files (>>50), use sleep to avoid getting kicked off the FTP server
#links <- selectDWD(res="daily", var="solar")
#sol <- dataDWD(links, sleep=20) # random waiting time after download (0 to 20 secs)

# Real life examples can be found in the use cases section of the vignette:
# browseURL("https://bookdown.org/brry/rdwd")

## End(Not run)
```

DEU	<i>Map of German states (Bundeslaender) from GADM through the raster package</i>
-----	--

Description

Map of German states (Bundeslaender) from GADM through the raster package

Format

Formal class 'SpatialPolygons' (package "sp") with 4 slots

Details

Use directly with:

```
load(system.file("extdata/DEU.rda", package="rdwd"))
```

Obtained with the code:

```
DEU1 <- raster::getData("GADM", country="DEU", level=1)
DEU <- rgeos::gSimplify(DEU1, tol=0.02, topologyPreserve=FALSE)
raster::plot(DEU1)
raster::plot(DEU)
save(DEU, file="inst/extdata/DEU.rda")
tools::resaveRdaFiles("inst/extdata/DEU.rda")
```

dirDWD *directory management for rdwd*

Description

Manage directories with useful messages in the rdwd package.

Usage

```
dirDWD(dir = "DWDdata", quiet = rdwdquiet())
```

Arguments

dir	Char for dirDWD: writeable directory name. Created if not existent. DEFAULT: "DWDdata" at current getwd()
quiet	Logical: Suppress messages about creating dir? DEFAULT: FALSE through rdwdquiet()

Value

dirDWD invisibly returns the prior working directory as per [setwd\(\)](#).

Author(s)

Berry Boessenkool, <berry-b@gmx.de>, Oct 2016

```

dwdbase *DWD FTP Server base URL*

Description

base URLs to the DWD FTP Server

dwdbase: observed climatic records at

ftp://opendata.dwd.de/climate_environment/CDC/observations_germany/climate

An overview of available datasets and usage suggestions can be found at

<https://bookdown.org/brry/rdwd/available-datasets.html>

<https://bookdown.org/brry/rdwd/station-selection.html>

gridbase: spatially interpolated gridded data at

ftp://opendata.dwd.de/climate_environment/CDC/grids_germany

Usage instructions can be found at

<https://bookdown.org/brry/rdwd/raster-data.html>

Usage

dwdbase

Format

An object of class character of length 1.

dwdparams

DWD parameter explanations

Description

Short German parameter explanations for the DWD abbreviations on the CDC FTP server.

These are manually created by me and might need to be expanded if the DWD adds more abbreviations.

`readVars()` maps them to the variable abbreviations in the "Metadaten_Parameter.*txt" file in any given zip folder and will warn about missing entries.

Usage

dwdparams

Format

An object of class `data.frame` with 163 rows and 2 columns.

Author(s)

Berry Boessenkool, <berry-b@gmx.de>, Jun 2018

See Also

[readVars\(\)](#), [readDWD\(\)](#)

Examples

```
head(dwdparams)
```

EUR

Map of Western European countries through the rworldmap package

Description

Map of Western European countries through the rworldmap package

Format

SpatialPolygonsDataFrame (package "sp") with 32 rows

Details

Use directly with:

```
load(system.file("extdata/EUR.rda", package="rdwd"))
```

Obtained with the code:

```
EUR <- rworldmap::getMap("low")
EUR <- raster::crop(EUR, c(-5,25, 40,60))
raster::plot(EUR)
save(EUR, file="inst/extdata/EUR.rda", version=2)
tools::resaveRdaFiles("inst/extdata/EUR.rda", version=2)
```

fileType	<i>determine DWD file type</i>
----------	--------------------------------

Description

determine which subfunction to call in `readDWD()` from the file extension (ext).

The first block is for **observational data** ([overview](#)), the second for **gridded data** ([overview](#)).
Click on the type for the subfunction documentation, e.g. [data](#) for `readDWD.data()`.

type	ext	notes
data	.zip	For regular data at dwdbase .
meta	.txt	For Beschreibung.txt files. For zip files containing station meta information, see readMeta() .
multia	[SO]	[SO]: file ends with "Standort.txt". Overrides meta.
stand	[SF]	[SF]: file contains "standard_format". For subdaily/standard_format files.
<hr/>		
radar	.gz	For when the file contains a single binary file.
binary	.tar.gz	The common radolan format, as far as I can tell.
raster	.asc.gz	E.g. for seasonal data at gridbase .
nc	.nc.gz	For netcdf files.
asc	.tar	For a file containing asc files.

Usage

```
fileType(file)
```

Arguments

file	Filename(s) with extension.
------	-----------------------------

Value

Character (vector)

Author(s)

Berry Boessenkool, <berry-b@gmx.de>, Jul 2020

See Also[readDWD\(\)](#)**Examples**

```
ft <- read.table(header=TRUE, stringsAsFactors=FALSE, text="

stopifnot(fileType(ft$filename)==ft$type)
fileType("random_stuff.odt")
```

findID

*find DWD weather station ID from name***Description**

Identify DWD weather station ID from station name

Usage

```
findID(name = "", exactmatch = TRUE, mindex = metaIndex, quiet = rdwdquiet())
```

Arguments

name	Char: station name(s) that will be matched in mindex to obtain id . DEFAULT: ""
exactmatch	Logical: Should name match an entry in mindex exactly (be ==)? If FALSE, name may be a part of mindex\$Stationsname, as checked with grepl() . This is useful e.g. to get all stations starting with a name (e.g. 42 IDs for Berlin). DEFAULT: TRUE
mindex	Single object: Index used to select id if name is given. DEFAULT: metaIndex
quiet	Logical: suppress length warnings? DEFAULT: FALSE through rdwdquiet()

Value

Character string (vector) with ID(s)

Author(s)

Berry Boessenkool, <berry-b@gmx.de>, Oct-Nov 2016

See Also

used in [selectDWD\(\)](#), [metaInfo\(\)](#)

Examples

```
# Give weather station name (must be existing in metaIndex):
findID("Potsdam")
findID("potsDam") # capitalization is ignored
# all names containing "Hamburg":
findID("Hamburg", exactmatch=FALSE)
findID("Potsdam", exactmatch=FALSE)

# vectorized:
findID(c("Potsdam", "Berlin-Buch"))

# German Umlauts are changed to ue, ae, oe, ss
findID("Muenchen", FALSE)
berryFunctions::convertUmlaut("M?nchen") # use this to convert umlauts in lists
```

index

Indexes of files and metadata on the DWD CDC FTP server

Description

Created with [indexFTP\(\)](#) and [createIndex\(\)](#) used in [updateIndexes\(\)](#).

In functions, you can access them with `rdwd::fileIndex` etc.

fileIndex: A data.frame with the filenames (and derived information) at the default base value [dwdbase](#).

metaIndex: A data.frame with the contents of all the station description files (..._Beschreibung_Stationen.txt) under [dwdbase](#).

geoIndex: metaIndex distilled to geographic locations.

gridIndex: Vector of file paths at [gridbase](#).

formatIndex: (modified) table from ftp://opendata.dwd.de/climate_environment/CDC/observations_germany/climate/subdaily/standard_format/formate_kl.html

Format

fileIndex: data.frame with character strings. ca 260k rows x 8 columns:
res, var, per (see [selectDWD\(\)](#)), station id, time series start and end, and ismeta information, all according to path.

metaIndex: data.frame with ca 97k rows for 12 columns:
Stations_id, von_datum, bis_datum, Stationshoehe, geoBreite, geoLaenge, Stationsname, Bundesland, res, var, per, hasfile

geoIndex: data.frame with ca 6k rows for 11 columns:
id, name, state, lat, lon, ele, nfiles, nonpublic, recentfile, display, col

gridIndex: Vector with ca 50k file paths at [gridbase](#)

formatIndex: data.frame with 140 rows for 12 columns:
Ke_Ind, Kennung, Label, Beschreibung, Einheit, Code-Tabellen, Zusatzinfo, Typ, Pos, Erlaubt, Fehlk, dividebyten

# because Hadley says 'Never @export a data set' in
# browseURL("http://r-pkgs.had.co.nz/data.html#data-data")
```

Description

Create a list of all the files (in all subfolders) of an FTP server. Defaults to the German Weather Service (DWD, Deutscher WetterDienst) OpenData server at ftp://opendata.dwd.de/climate_environment/CDC/observations_germany/climate/.

The R package RCur1 must be available to do this.

It's not suggested to run this for all folders, as it can take quite some time and you may get kicked off the FTP-Server. This package contains an index of the climatic observations at weather stations ([fileIndex](#)) and gridded datasets ([gridIndex](#)). If they are out of date, please let me know!

Getting banned from the FTP Server

Normally, this shouldn't happen anymore: since Version 0.10.10 (2018-11-26), a single RCurl handle is used for all FTP requests and since version 1.0.17 (2019-05-14), the file tree provided by the DWD is used to obtain all folders first, eliminating the recursive calls.

There's a provision if the FTP server detects bot requests and denies access. If `RCurl::getURL()` fails, there will still be an output which you can pass in a second run via `folder` to extract the remaining dirs. You might need to wait a bit and set `sleep` to a higher value in that case. Here's an example:

```
gridindex <- indexFTP("", gridbase)
gridindex <- indexFTP(gridindex, gridbase, sleep=15)
```

Of course, with a higher sleep value, the execution will take longer!

Usage

```
indexFTP(
  folder = "currentfindex",
  base = dwdbase,
  is.file.if.has.dot = TRUE,
  exclude.latest.bin = TRUE,
  fast = TRUE,
  sleep = 0,
  dir = "DWDdata",
  filename = folder[1],
  overwrite = FALSE,
  quiet = rdwdquiet(),
  progbar = !quiet,
  verbose = FALSE
)
```

Arguments

`folder` Folder(s) to be indexed recursively, e.g. `"/hourly/wind/"`. Leading slashes will be removed. Use `folder=""` to search at the location of base itself. If `folder` is `"currentfindex"` (the default) and `base` is the default, `folder` is changed to all observational folders listed in the current tree file at <ftp://opendata.dwd.de/>

	weather/tree.html . With "currentgindex" and gridbase, the grid folders in the tree are used. DEFAULT: "currentfindex"
base	Main directory of FTP server. Trailing slashes will be removed. DEFAULT: dwdbase
is.file.if.has.dot	Logical: if some of the input paths contain a dot, treat those as files, i.e. do not try to read those as if they were a folder. Only set this to FALSE if you know what you're doing. DEFAULT: TRUE
exclude.latest.bin	Exclude latest file at opendata.dwd.de/weather/radar/radolan? RCurl::getURL indicates this is a pointer to the last regularly named file. DEFAULT: TRUE
fast	Read tree file with data.table::fread() (1 sec) instead of readLines() (10 secs)? DEFAULT: TRUE
sleep	If not 0, a random number of seconds between 0 and sleep is passed to Sys.sleep() after each read folder to avoid getting kicked off the FTP-Server, see note above. DEFAULT: 0
dir	Writeable directory name where to save the downloaded file. Created if not existent. DEFAULT: "DWDdata" at current getwd()
filename	Character: Part of output filename. "INDEX_of_DWD_" is prepended, "/" replaced with "_", ".txt" appended. DEFAULT: folder[1]
overwrite	Logical: Overwrite existing file? If not, "_n" is added to the filename, see berryFunctions::newFilename() . DEFAULT: FALSE
quiet	Suppress progbars and message about directory/files? DEFAULT: FALSE through rdwdquiet()
progressbar	Logical: present a progress bar in each level? DEFAULT: TRUE
verbose	Logical: write a lot of messages from RCurl::getURL() ? DEFAULT: FALSE (usually, you dont need all the curl information)

Value

a vector with file paths

```

```
## End(Not run)
```

lldist	<i>distance between lat-long coordinates</i>
--------	--

Description

Great-circle distance between points at lat-long coordinates. Mostly a copy of `OSMscale::earthDist` Version 0.5.3 (2017-04-19). <https://github.com/brry/OSMscale/blob/master/R/earthDist.R#L57-L102>. Copied manually to avoid dependency hell. Does not check coordinates. Not exported.

Usage

```
lldist(lat, long, data, r = 6371, i = 1L)
```

```
maxlldist(lat, long, data, r = 6371, fun = max, each = TRUE, ...)
```

Arguments

lat, long	Latitude (North/South) and longitude (East/West) coordinates in decimal degrees
data	Optional: data.frame with the columns lat and long
r	radius of the earth. Could be given in miles. DEFAULT: 6371 (km)
i	Integer: Index element against which all coordinate pairs are computed. DEFAULT: 1
fun	Function to be applied. DEFAULT: <code>max()</code>
each	Logical: give max dist to all other points for each point separately? If FALSE, will return the maximum of the complete distance matrix, as if <code>max(maxlldist(y, x))</code> . For examples, see <code>OSMscale::maxEarthDist</code> DEFAULT: TRUE
...	Further arguments passed to fun, like <code>na.rm=TRUE</code>

Value

Vector with distance(s) in km (or units of r, if r is changed)

Author(s)

Berry Boessenkool, <brry-b@gmx.de>, Aug 2016 + Jan 2017. Angle formula from Diercke Weltatlas 1996, Page 245

localtestdir	<i>local test data directory</i>
--------------	----------------------------------

Description

returns a directory used for local tests on Berry's computers. This is used in many examples to save the downloaded DWD data in this directory, thus avoiding multiple downloads of the same file.

Usage

```
localtestdir(packdir = ".", folder = "misc/localdata", file = NULL)
```

Arguments

packdir	Path to package directory. DEFAULT: "."
folder	Path inside package. DEFAULT: "misc/localdata"
file	Optional: path(s) at folder. DEFAULT: NULL

Value

charstring (directory)

Author(s)

Berry Boessenkool, <berry-b@gmx.de>, Apr 2019

See Also

[runLocalTests\(\)](#)

Examples

```
localtestdir()
```

metaInfo	<i>Information for a station ID on the DWD CDC FTP server</i>
----------	---

Description

Information for a station ID on the DWD CDC FTP server

Usage

```
metaInfo(id, hasfileonly = TRUE)
```

Arguments

`id` Station ID (integer number or convertible to one)
`hasfileonly` Logical: Only show entries that have files? DEFAULT: TRUE

Value

invisible data.frame. Also `prints` the output nicely formatted.

Author(s)

Berry Boessenkool, <berry-b@gmx.de>, Nov 2016

[metaIndex](#)

Examples

```
metaInfo(2849)
```

<code>nearbyStations</code>	<i>Find DWD stations close to given coordinates</i>
-----------------------------	---

Description

Select DWD stations within a given radius around a set of coordinates

Usage

```
nearbyStations(  
  lat,  
  lon,  
  radius,  
  res = NA,  
  var = NA,  
  per = NA,  
  mindate = NA,  
  hasfileonly = TRUE,  
  statname = "nearbyStations target location",  
  quiet = rdwdquiet(),  
  ...  
)
```

Arguments

lat	Coordinates y component [degrees N/S, range 47:55]
lon	Coordinates x component [degrees E/W, range 6:15]
radius	Maximum distance [km] within which stations will be selected
res, var, per	Restrictions for dataset type as documented in selectDWD() . Each can be a vector of entries. DEFAULTS: NA (ignored)
mindate	Minimum dataset ending date (as per metadata). DEFAULT: NA
hasfileonly	Logical: only return entries for which there is an open-access file available? DEFAULT: TRUE
statname	Character: name for target location. DEFAULT: "nearbyStations target location"
quiet	Logical: suppress progress messages? DEFAULT: FALSE through rdwdquiet()
...	Further arguments passed to selectDWD()

Value

[metaIndex](#) subset with additional columns "dist" and "url"

Author(s)

Berry Boessenkool, <berry-b@gmx.de>, Mar 2017

See Also

[selectDWD\(\)](#), [metaIndex](#)

Examples

```
m <- nearbyStations(49.211784, 9.812475, radius=30,
  res=c("daily","hourly"), var= c("precipitation","more_precip","kl") ,
  mindate=as.Date("2016-05-30"), statname="Braunsbach catchment center")
# View(m)
```

```
# for a continued example of this, see the vignette in chapter
# use case: plot all rainfall values around a given point
# browseURL("https://bookdown.org/brry/rdwd")
```

newColumnNames	<i>Enhance readDWD column names</i>
----------------	-------------------------------------

Description

Add short German parameter descriptions to the DWD abbreviations. This uses [dwdparams\(\)](#) to create column names like "TT_TU.Lufttemperatur" and "RSK.Niederschlagshoehe." Column names not in the abbreviation list will be left untouched.

Usage

```
newColumnNames(dataframe, variables = dwdparams, separator = ".")
```

Arguments

dataframe	Dataframe as returned by readDWD.data()
variables	Dataframe as returned by readVars() for a single file. Rownames must be variable abbreviations. There must be a "Kurz" column. DEFAULT: dwdparams
separator	Separator between abbreviation and long name. DEFAULT: "."

Value

The dataframe with new column names

Author(s)

Berry Boessenkool, <berry-b@gmx.de>, Apr 2019

# mainly for internal usage
```

`plotRadar`*plot radar products on a pretty map*

Description

Convenience function to plot radar products on a pretty map. Creates a separate plot for each layer, a selection is possible.

Usage

```
plotRadar(  
  x,  
  layer = NULL,  
  main = x@title,  
  land = "gray80",  
  sea = "cadetblue1",  
  de = "grey80",  
  eu = "black",  
  col = berryFunctions::seqPal(),  
  xlim = NULL,  
  ylim = NULL,  
  zlim = NULL,  
  axes = TRUE,  
  las = 1,  
  mar = c(2.5, 3.5, 2.5, 5),  
  keeppar = TRUE,  
  project = TRUE,  
  proj = "radolan",  
  extent = "radolan",  
  targetproj = "11",  
  quiet = rdwdquiet(),  
  ...  
)
```

Arguments

<code>x</code>	raster object, e.g. 'dat' element of object returned by <code>readDWD()</code> .
<code>layer</code>	Optional: selected layer(s) to be plotted. DEFAULT: NULL
<code>main</code>	Graph title(s). Use "" to suppress. Note <code>output@title</code> is set to <code>main!</code> DEFAULT: <code>x@title</code>
<code>land</code>	Color of land areas in the map. DEFAULT: "gray80"
<code>sea</code>	Color of sea areas in the map. DEFAULT: "cadetblue1"
<code>de</code>	Color of Deutschland Bundesland borders (DEU). DEFAULT: "grey80"
<code>eu</code>	Color of Europe country borders (EUR). DEFAULT: "black"
<code>col</code>	Color palette for the data itself. DEFAULT: <code>berryFunctions::seqPal()</code>

xlim	xlim. DEFAULT: NULL, i.e. taken from x extent (after reprojection if project=TRUE)
ylim	ylim. DEFAULT: NULL, i.e. taken from y extent (after reprojection if project=TRUE)
zlim	zlim. 3 Options: two-number vector, zlim="ind" for individual zlim per layer, or NULL for range of selected layer(s). DEFAULT: NULL
axes	Draw axes? DEFAULT: TRUE
las	LabelAxisStyle for axes. DEFAULT: 1 (all upright)
mar	Vector with plot margins. DEFAULT: c(2.5, 3.5, 2.5, 5)
keeppar	Logical: keep the margins set with par, so later points etc are added in the right location? DEFAULT: TRUE, opposite to sf::plot with reset=TRUE, see https://github.com/cran/sf/blob/master/R/plot.R
project	Project the data before plotting? Not needed if <code>projectRasterDWD()</code> has already been called. DEFAULT: TRUE
proj	current projection, see <code>projectRasterDWD()</code> , used only if project=TRUE. DEFAULT: "radolan"
extent	current extent, see <code>projectRasterDWD()</code> , used only if project=TRUE. DEFAULT: "radolan"
targetproj	target projection, see <code>projectRasterDWD()</code> , used only if project=TRUE. DEFAULT: "ll"
quiet	suppress progress messages? DEFAULT: FALSE through <code>rdwdquiet()</code>
...	Further arguments passed to <code>raster::plot()</code>

Value

raster object, projected (if project=TRUE). If length(layer)==1, only that selected layer is returned. output@title is set to main.

Author(s)

Berry Boessenkool, <berry-b@gmx.de>, Feb 2020

rad <- dataDWD(link, base=gridbase, joinbf=TRUE, dir=tempdir())
radp <- plotRadar(rad, proj="seasonal", extent=rad@extent, main="plotRadar ex")
plotRadar(radp, ylim=c(52,54), project=FALSE) # reuses main

# plotRadar equivalent, map only country borders:
radpm <- projectRasterDWD(rad[[1]], proj="seasonal", extent=rad@extent)
raster::plot(radpm)
addBorders()
```

```

# several layers
url <- "daily/Project_TRY/pressure/PRED_199606_daymean.nc.gz" # 5 MB
nc <- dataDWD(url, base=gridbase, joinbf=TRUE, dir=localtestdir())

ncp3 <- plotRadar(nc, main=paste(nc@title, nc@z[[1]]), layer=1:3,
                 col=terrain.colors(100), proj="nc", extent="nc")
plotRadar(ncp3, layer=3:4, project=FALSE) # still has all layers
plotRadar(ncp3, layer=4:5, project=FALSE, zlim="ind") # individual zlims per layer
plotRadar(ncp3, layer=1, project=FALSE, zlim=c(1016,1020))

ncp1 <- plotRadar(nc, layer=1, proj="nc", extent="nc") # much faster projection
# no longer has layers 2-4:
berryFunctions::is.error(plotRadar(ncp1, layer=1:4, project=FALSE), TRUE, TRUE)

## End(Not run)

```

projectRasterDWD	<i>project DWD raster data</i>
------------------	--------------------------------

Description

Set projection and extent for DWD raster data. Optionally (and per default) also reprojects to latlon data.

WARNING: reprojection to latlon changes values slightly. For the tested RX product, this change is significant, see: <https://github.com/brry/rdwd/blob/master/misc/ExampleTests/Radartests.pdf>

In raster::plot, use **zlim with the original range** if needed.

Usage

```

projectRasterDWD(
  r,
  proj = "radolan",
  extent = "radolan",
  targetproj = "ll",
  quiet = rdwdquiet()
)

```

Arguments

r	Raster object
proj	Current projection to be given to r. Can be <ul style="list-style-type: none"> - a <code>raster::crs()</code> input (e.g. a projection character string), - NULL to not set proj+extent (but still consider targetproj), - or a special charstring for internal defaults, namely: "radolan" (readDWD.binary)

	+ .asc + .radar), "seasonal" (.raster) or "nc" (.nc). DEFAULT: "radolan"
extent	Current <code>raster::extent()</code> to be given to <code>r</code> . Ignored if <code>proj=NULL</code> . Can be an extent object, a vector with 4 numbers, or "radolan" / "rw" / "seasonal" / "nc" with internal defaults. DEFAULT: "radolan"
targetproj	<code>r</code> is reprojected to this <code>raster::crs()</code> . Use <code>NULL</code> to not reproject (i.e. only set <code>proj</code> and <code>extent</code>). DEFAULT: "ll" with internal default for lat-lon.
quiet	Logical: suppress progress messages? DEFAULT: FALSE through <code>rdwdquiet()</code>

Details

The internal defaults are extracted from the Kompositformatbeschreibung at <https://www.dwd.de/DE/leistungen/radolan/radolan.html>, as provided 2019-04 by Antonia Hengst. The nc extent was obtained by projecting Germanys bbox to EPSG 3034 (specified in the DWD documentation). Using that as a starting point, I then refined the extent to a visual match, see [developmentNotes.R](#)

Value

Raster object with projection and extent, invisible

Author(s)

Berry Boessenkool, <berry-b@gmx.de>, May 2019

rdwd

Handle Climate Data from DWD (German Weather Service)

Description

- find, select, download + read data from the German weather service DWD
- vectorized, progress bars, no re-downloads
- index of files + meta data

- observational time series from 6k meteorological recording stations (2.5k active)
-> rain, temperature, wind, sunshine, pressure, cloudiness, humidity, snow, ...
- gridded raster data from radar + interpolation
- european data stock slowly growing
For an introduction to the package, see <https://bookdown.org/brry/rdwd>.

rdwdquiet

global quiet option for rdwd

Description

global quiet option. The default `rdwdquiet()` is FALSE.
Just write the following in your code and all subsequent calls will be quiet:
`options(rdwdquiet=TRUE)`

Usage

`rdwdquiet()`

readDWD

*Process data from the DWD CDC FTP Server***Description**

Read climate data that was downloaded with [dataDWD\(\)](#). The data is unzipped and subsequently, the file(s) are read, processed and returned as a data.frame / raster object.

For observational data, new users are advised to set `varnames=TRUE` to obtain more informative column names.

`readDWD` will call internal (but documented) subfunctions depending on the argument type, see the overview in [fileType\(\)](#).

Not all arguments to `readDWD` are used for all subfunctions, e.g. `fread` is used only by [readDWD.data](#), while `dividebyten` is used in [readDWD.raster](#) and [readDWD.asc](#).

`file` can be a vector with several filenames. Most other arguments can also be a vector and will be recycled to the length of `file`.

Usage

```
readDWD(
  file,
  type = fileType(file),
  varnames = FALSE,
  fread = NA,
  format = NA,
  tz = "GMT",
  dividebyten = TRUE,
  var = "",
  progbar = !quiet,
  quiet = rdwdquiet(),
  ...
)
```

Arguments

<code>file</code>	Char (vector): name(s) of the file(s) downloaded with dataDWD() , e.g. <code>"~/DWD-data/tageswerte_KL_02575_akt.zip"</code> or <code>"~/DWDdata/RR_Stundenwerte_Beschreibung_Stationen.txt"</code>
<code>type</code>	Character (vector) determining which subfunction to call. DEFAULT: fileType(file) .
<code>varnames</code>	Logical (vector): Expand column names? Only used in readDWD.data() . DEFAULT: FALSE (for backward compatibility)
<code>fread</code>	Logical (vector): read fast? Used in readDWD.data() . DEFAULT: NA (experimental, see issue 22)
<code>format, tz</code>	Format and time zone of time stamps, see readDWD.data()

dividebyten	Logical (vector): Divide the values in raster files by ten? Used in <code>readDWD.raster()</code> and <code>readDWD.asc()</code> . DEFAULT: TRUE
var	var for <code>readDWD.nc()</code> . DEFAULT: ""
progbar	Logical: present a progress bar with estimated remaining time? If missing and <code>length(file)==1</code> , progbar is internally set to FALSE. DEFAULT: !quiet
quiet	Logical: suppress messages? DEFAULT: FALSE through <code>rdwdquiet()</code>
...	Further arguments passed to the internal <code>readDWD.*</code> subfunctions (see <code>fileType</code>) and from those to the underlying actual reading functions

Value

For observational data, an invisible `data.frame` of the desired dataset, or a named list of `data.frames` if `length(file) > 1`.

For gridded data, raster objects.

Author(s)

Berry Boessenkool, <berry-b@gmx.de>, Jul-Oct 2016, Winter 2018/19

# see dataDWD and readDWD.* subfunctions
```

readDWD.asc	<i>read dwd gridded radolan asc data</i>
-------------	--

Description

read grid-interpolated radolan asc data. Intended to be called via `readDWD()`.

All layers (following selection if given) in all `.tar.gz` files are combined into a raster stack with `raster::stack()`.

To project the data, use `projectRasterDWD()`

Usage

```
readDWD.asc(
  file,
  exdir = NULL,
  dividebyten = TRUE,
  selection = NULL,
  quiet = rdwdquiet(),
```

```

    progbar = !quiet,
    ...
)

```

Arguments

file	Name of file on harddrive, like e.g. DWDdata/grids_germany/hourly/radolan/historical/asc/2018_RW-201809.tar. Must have been downloaded with mode="wb"!
exdir	Directory to unzip into. Unpacked files existing therein will not be untarred again, saving up to 15 secs per file. DEFAULT: NULL (subfolder of <code>tempdir()</code>)
dividebyten	Divide numerical values by 10? If dividebyten=FALSE and exdir left at NULL (<code>tempdir</code>), save the result on disc with <code>raster::writeRaster()</code> . Accessing out-of-memory raster objects won't work if exdir is removed! -> Error in <code>local(Object, ...)</code> DEFAULT: TRUE
selection	Optionally read only a subset of the $\sim 24 \times 31 = 744$ files. Called as <code>f[selection]</code> . DEFAULT: NULL (ignored)
quiet	Suppress progress messages? DEFAULT: FALSE through <code>rdwdquiet()</code>
progbar	Show progress bars? <code>readDWD()</code> will keep <code>progbar=TRUE</code> for asc files, even if <code>length(file)==1</code> . DEFAULT: !quiet, i.e. TRUE
...	Further arguments passed to <code>raster::raster()</code>

Value

data.frame

Author(s)

Berry Boessenkool, <berry-b@gmx.de>, April 2019

[readDWD\(\)](#)

Examples

```

## Not run: # Excluded from CRAN checks, but run in localtests

# File selection and download:
datadir <- localtestdir()
radbase <- paste0(gridbase, "/hourly/radolan/historical/asc/")
radfile <- "2018/RW-201809.tar" # 25 MB to download
file <- dataDWD(radfile, base=radbase, joinbf=TRUE, dir=datadir,
               dbin=TRUE, read=FALSE) # download with mode=wb!!!

#asc <- readDWD(file) # 4 GB in mem. ~ 20 secs unzip, 30 secs read, 10 min divide
asc <- readDWD(file, selection=1:5, dividebyten=TRUE)
plotRadar(asc[[1]], main=names(asc)[1])

viddir <- paste0(tempdir(), "/RadolanVideo")

```

```

dir.create(viddir)
png(paste0(viddir,"/Radolan_%03d.png"), width=7, height=5, units="in", res=300)
plotRadar(asc, layer=1:3, main=names(asc)) # 3 secs per layer
dev.off()
berryFunctions::openFile(paste0(viddir,"/Radolan_001.png"))

# Time series of a given point in space:
plot(as.vector(asc[800,800,]), type="l", xlab="Time [hours]")

# if dividebyten=FALSE, raster stores things out of memory in the exdir.
# by default, this is in tempdir, hence you would need to save asc manually:
# raster::writeRaster(asc, paste0(datadir,"/RW2018-09"), overwrite=TRUE)

## End(Not run)

```

readDWD.binary	<i>read dwd gridded radolan binary data</i>
----------------	---

Description

read gridded radolan binary data. Intended to be called via [readDWD\(\)](#).

Usage

```

readDWD.binary(
  file,
  exdir = sub(".tar.gz$", "", file),
  toraster = TRUE,
  quiet = rdwdquiet(),
  progbar = !quiet,
  selection = NULL,
  ...
)

```

Arguments

file	Name of file on harddrive, like e.g. DWDdata/daily_radolan_historical_bin_2017_SF201712.tar.gz
exdir	Directory to unzip into. If existing, only the needed files will be unpacked with untar() . Note that exdir size will be around 1.1 GB. exdir can contain other files, these will be ignored for the actual reading with dwdradar::readRadarFile() . DEFAULT exdir: sub(".tar.gz\$", "", file)
toraster	Logical: convert output (list of matrixes + meta informations) to a list with dat (raster::stack) + meta (list from the first subfile, but with vector of dates)? DEFAULT: TRUE
quiet	Suppress progress messages? DEFAULT: FALSE through rdwdquiet()

progbar Show progress bars? `readDWD()` will keep `progbar=TRUE` for binary files, even if `length(file)==1`. DEFAULT: `!quiet`, i.e. `TRUE`
selection Optionally read only a subset of the `~24*31=744` files. Called as `f[selection]`. DEFAULT: `NULL` (ignored)
... Further arguments passed to `dwdradar::readRadarFile()`, i.e. `na` and `clutter`

Value

list depending on argument `toraster`, see there for details

Author(s)

Berry Boessenkool, <berry-b@gmx.de>, Dec 2018. Significant input for the underlying `dwdradar::readRadarFile()` came from Henning Rust & Christoph Ritschel at FU Berlin.

## Not run: # Excluded from CRAN checks, but run in localtests

# SF file as example: ----

SF_link <- "/daily/radolan/historical/bin/2017/SF201712.tar.gz"
SF_file <- dataDWD(url=SF_link, base=gridbase, joinbf=TRUE, # 204 MB
                  dir=localtestdir(), read=FALSE)
# exdir radardir set to speed up my tests:
SF_exdir <- "C:/Users/berry/Desktop/DWDbinarySF"
if(!file.exists(SF_exdir)) SF_exdir <- tempdir()
# no need to read all 24*31=744 files, so setting selection:
SF_rad <- readDWD(SF_file, selection=1:10, exdir=SF_exdir) #with toraster=TRUE
if(length(SF_rad)!=2) stop("length(SF_rad) should be 2, but is ", length(SF_rad))

SF_radp <- plotRadar(SF_rad$dat, layer=1:3, main=SF_rad$meta$date)
plotRadar(SF_radp, layer=1, project=FALSE)

# RW file as example: ----

RW_link <- "hourly/radolan/reproc/2017_002/bin/2017/RW2017.002_201712.tar.gz"
RW_file <- dataDWD(url=RW_link, base=gridbase, joinbf=TRUE, # 25 MB
                  dir=localtestdir(), read=FALSE)
RW_exdir <- "C:/Users/berry/Desktop/DWDbinaryRW"
if(!file.exists(RW_exdir)) RW_exdir <- tempdir()
RW_rad <- readDWD(RW_file, selection=1:10, exdir=RW_exdir)
RW_radp <- plotRadar(RW_rad$dat[[1]], main=RW_rad$meta$date[1], extent="rw")

```

```
# ToDo: why are values + patterns not the same?

# list of all Files: ----
data(gridIndex)
head(grep("historical", gridIndex, value=TRUE))

## End(Not run)
```

readDWD.data	<i>read regular dwd data</i>
--------------	------------------------------

Description

Read regular dwd data. Intended to be called via `readDWD()`.

Usage

```
readDWD.data(
  file,
  fread = FALSE,
  varnames = FALSE,
  format = NA,
  tz = "GMT",
  quiet = rdwdquiet(),
  ...
)
```

Arguments

<code>file</code>	Name of file on harddrive, like e.g. <code>DWDdata/daily_kl_recent_tageswerte_KL_03987_akt.zip</code>
<code>fread</code>	Logical: read faster with <code>data.table::fread</code> ? When reading many large historical files, speedup is significant. When called from <code>readDWD()</code> , NA can also be used, which means TRUE if <code>data.table</code> is available. DEFAULT: FALSE
<code>varnames</code>	Logical (vector): add a short description to the DWD variable abbreviations in the column names? E.g. change FX,TNK to FX.Windspitze,TNK.Lufttemperatur_Min, see <code>newColumnNames()</code> . DEFAULT: FALSE (for backwards compatibility)
<code>format</code>	Char (vector): Format passed to <code>as.POSIXct()</code> (see <code>strptime()</code>) to convert the date/time column to POSIX time format. If NULL, no conversion is performed (date stays a factor). If NA, <code>readDWD</code> tries to find a suitable format based on the number of characters. DEFAULT: NA
<code>tz</code>	Char (vector): time zone for <code>as.POSIXct()</code> . "" is the current time zone, and "GMT" is UTC (Universal Time, Coordinated). DEFAULT: "GMT"
<code>quiet</code>	Suppress empty file warnings and subfunction name message? DEFAULT: FALSE through <code>rdwdquiet()</code>
<code>...</code>	Further arguments passed to <code>read.table()</code> or <code>data.table::fread()</code>

Value

data.frame

Author(s)

Berry Boessenkool, <berry-b@gmx.de>

--------------	--

Description

read dwd metadata (Beschreibung*.txt files). Intended to be called via [readDWD\(\)](#). Column widths for [read.fwf\(\)](#) are computed internally. `if(any(meta))`, [readDWD\(\)](#) tries to set the locale to German (to handle Umlaute correctly). It is hence not recommended to call `rdwd:::readDWD.meta` directly on a file! Names can later be changed to ascii with [berryFunctions::convertUmlaut\(\)](#).

Usage

```
readDWD.meta(file, quiet = rdwdquiet(), ...)
```

Arguments

file	Name of file on harddrive, like e.g. DWDdata/daily_kl_recent_KL_Tageswerte_Beschreibung_Stationen.
quiet	Suppress subfunction name message? DEFAULT: FALSE through rdwdquiet()
...	Further arguments passed to read.fwf()

Value

data.frame

Author(s)

Berry Boessenkool, <berry-b@gmx.de>

[readDWD\(\)](#)

Examples

```
## Not run: # Excluded from CRAN checks, but run in localtests

link <- selectDWD(res="daily", var="kl", per="r", meta=TRUE)
if(length(link)!=1) stop("length of link should be 1, but is ", length(link),
                        ":\n", berryFunctions::truncMessage(link,prefix="",sep="\n"))

file <- dataDWD(link, dir=localtestdir(), read=FALSE)
meta <- readDWD(file)
head(meta)

cnm <- colnames(meta)
if(length(cnm)!=8) stop("number of columns should be 8, but is ", length(cnm),
                       ":\n", toString(cnm))

## End(Not run)
```

readDWD.multia	<i>read multi_annual dwd data</i>
----------------	-----------------------------------

Description

read multi_annual dwd data. Intended to be called via `readDWD()`.
 All other observational data at [dwdbase](#) can be read with `readDWD.data()`, except for the multi_annual and subdaily/standard_format data.

Usage

```
readDWD.multia(
  file,
  fileEncoding = "latin1",
  comment.char = "\032",
  quiet = rdwdquiet(),
  ...
)
```

Arguments

file	Name of file on harddrive, like e.g. DWDdata/multi_annual_mean_81-10_Temperatur_1981-2010_aktStandort.txt or DWDdata/multi_annual_mean_81-10_Temperatur_1981-2010_Stationsliste_aktStandort.txt
fileEncoding	<code>read.table()</code> file encoding. DEFAULT: "latin1" (needed on Linux, optional but not hurting on windows)
comment.char	<code>read.table()</code> comment character. DEFAULT: "\032" (needed 2019-04 to ignore the binary control character at the end of multi_annual files)
quiet	Suppress subfunction name message? DEFAULT: FALSE through <code>rdwdquiet()</code>
...	Further arguments passed to <code>read.table()</code>

Value

data.frame

    col=berryFunctions::divPal(200, rev=TRUE), zlab=m, add=T)
}
dev.off()
berryFunctions::openFile("MultiAnn.pdf")

## End(Not run)
```

readDWD.nc	<i>read dwd netcdf data</i>
------------	-----------------------------

Description

Read netcdf data. Intended to be called via [readDWD\(\)](#).

Note that `R.utils` and `ncdf4` must be installed to unzip and read the `.nc.gz` files.

Usage

```
readDWD.nc(
  file,
  gargs = NULL,
  var = "",
  toraster = TRUE,
  quiet = rdwdquiet(),
  ...
)
```

Arguments

<code>file</code>	Name of file on harddrive, like e.g. <code>DWDdata/grids_germany/daily/Project_TRY/humidity/RH_199509_...</code>
<code>gargs</code>	Named list of arguments passed to <code>R.utils::gunzip()</code> , see <code>readDWD.raster()</code> . DEFAULT: NULL
<code>var</code>	if <code>toraster=FALSE</code> : Charstring with name of variable to be read with <code>ncdf4::ncvar_get()</code> . If not available, an interactive selection is presented. DEFAULT: "" (last variable)
<code>toraster</code>	Read file with <code>raster::brick()</code> ? All further arguments will be ignored. Specify e.g. <code>var</code> through ... as <code>varname</code> . DEFAULT: TRUE
<code>quiet</code>	Logical: Suppress Suppress subfunction name message and time conversion failure warning? DEFAULT: FALSE through <code>rdwdquiet()</code>
...	Further arguments passed to <code>raster::brick()</code> or <code>ncdf4::nc_open()</code>

Value

`raster::brick()` object. Alternatively, if `toraster=FALSE`, a list with time, lat, lon, var, varname, file and cdf. `cdf` is the output of `ncdf4::nc_open()`.

Author(s)

Berry Boessenkool, <berry-b@gmx.de>, Aug 2019

# nc <- readDWD(file, var="-") # uncommented to not block automated tests
str(nc$var)

## End(Not run)
```

readDWD.radar

read dwd gridded radolan radar data

Description

read gridded radolan radar data. Intended to be called via [readDWD\(\)](#).

Usage

```
readDWD.radar(file, gargs = NULL, toraster = TRUE, quiet = rdwdquiet(), ...)
```

Arguments

file	Name of file on harddrive, like e.g. DWDdata/hourly/radolan/recent/bin/ raa01-rw_10000-1802020250-dwd—bin.gz
------	--

<code>gargs</code>	Named list of arguments passed to <code>R.utils::gunzip()</code> . The internal defaults are: <code>remove=FALSE</code> (recommended to keep this so file does not get deleted) and <code>skip=TRUE</code> (which reads previously unzipped files as is). If file has changed, you might want to use <code>gargs=list(skip=FALSE,overwrite=TRUE)</code> or alternatively <code>gargs=list(temporary=TRUE)</code> . The <code>gunzip</code> default <code>destname</code> means that the unzipped file is stored at the same path as <code>file</code> . DEFAULT: <code>gargs=NULL</code>
<code>toraster</code>	Logical: convert output (list of matrixes + meta informations) to a list with data (<code>raster::stack</code>) + meta (list from the first subfile, but with vector of dates)? DEFAULT: <code>TRUE</code>
<code>quiet</code>	Suppress subfunction name message? DEFAULT: <code>FALSE</code> through <code>rdwdquiet()</code>
<code>...</code>	Further arguments passed to <code>dwdradar::readRadarFile()</code> , i.e. <code>na</code> and <code>clutter</code>

Value

Invisible list with `dat` (matrix or raster, depending on `toraster`) and `meta` (list with elements from header)

Author(s)

Berry Boessenkool, <berry-b@gmx.de>, Aug 2019. Significant input for the underlying `dwdradar::readRadarFile()` came from Henning Rust & Christoph Ritschel at FU Berlin.

 for format description

Examples

```
## Not run: # Excluded from CRAN checks, but run in localtests
# recent radar files
rrf <- indexFTP("hourly/radolan/recent/bin", base=gridbase, dir=tempdir())
lrf <- dataDWD(rrf[773], base=gridbase, joinbf=TRUE, dir=tempdir(), read=FALSE)
r <- readDWD(lrf)

plotRadar(r$dat, main=r$meta$date)

## End(Not run)
```

readDWD.raster	<i>read dwd gridded raster data</i>
----------------	-------------------------------------

Description

Read gridded raster data. Intended to be called via `readDWD()`.
 Note that `R.utils` must be installed to unzip the `.asc.gz` files.

Usage

```
readDWD.raster(file, gargs = NULL, dividebyten, quiet = rdwdquiet(), ...)
```

Arguments

<code>file</code>	Name of file on harddrive, like e.g. <code>DWDdata/grids_germany/seasonal/air_temperature_mean/16_DJF_grids_germany_seasonal_air_temp_mean_188216.asc.gz</code>
<code>gargs</code>	Named list of arguments passed to <code>R.utils::gunzip()</code> . The internal defaults are: <code>remove=FALSE</code> (recommended to keep this so file does not get deleted) and <code>skip=TRUE</code> (which reads previously unzipped files as is). If file has changed, you might want to use <code>gargs=list(skip=FALSE,overwrite=TRUE)</code> or alternatively <code>gargs=list(temporary=TRUE)</code> . The <code>gunzip</code> default <code>destname</code> means that the unzipped file is stored at the same path as <code>file</code> . DEFAULT <code>gargs</code> : <code>NULL</code>
<code>dividebyten</code>	Logical: Divide the numerical values by 10? DEFAULT: <code>TRUE</code>
<code>quiet</code>	Suppress subfunction name message? DEFAULT: <code>FALSE</code> through <code>rdwdquiet()</code>
<code>...</code>	Further arguments passed to <code>raster::raster()</code>

Value

`raster::raster` object

Author(s)

Berry Boessenkool, <berry-b@gmx.de>, Dec 2018

Examples

```
## Not run: # Excluded from CRAN checks, but run in localtests

rasterbase <- paste0(gridbase, "/seasonal/air_temperature_mean")
ftp.files <- indexFTP("/16_DJF", base=rasterbase, dir=tempdir())
localfiles <- dataDWD(ftp.files[1:2], base=rasterbase, joinbf=TRUE,
                     dir=localtestdir(), read=FALSE)
```

```

rf <- readDWD(localfiles[1])
rf <- readDWD(localfiles[1]) # runs faster at second time due to skip=TRUE
raster::plot(rf)

plotRadar(rf,proj="seasonal", extent=rf@extent)

testthat::expect_equal(raster::cellStats(rf, range), c(-8.2,4.4))
rf10 <- readDWD(localfiles[1], dividebyten=FALSE)
raster::plot(rf10)
testthat::expect_equal(raster::cellStats(rf10, range), c(-82,44))

## End(Not run)

```

readDWD.stand	<i>read subdaily/standard_format dwd data</i>
---------------	---

Description

read subdaily/standard_format dwd data. Intended to be called via `readDWD()`. All other observational data at [dwdbase](#) can be read with `readDWD.data()`, except for the multi_annual and subdaily/standard_format data.

Usage

```

readDWD.stand(
  file,
  fast = TRUE,
  fileEncoding = "latin1",
  formIndex = formatIndex,
  quiet = rdwdquiet(),
  ...
)

```

Arguments

file	Name of file on harddrive, like e.g. DWDdata/subdaily_standard_format_kl_10381_00_akt.txt or DWDdata/subdaily_standard_format_kl_10381_bis_1999.txt.gz
fast	Logical: use <code>readr::read_fwf()</code> instead of <code>read.fwf()</code> ? Takes 0.1 instead of 20 seconds but requires package to be installed. if fast=TRUE, fileEncoding is ignored. DEFAULT: TRUE
fileEncoding	<code>read.table()</code> file encoding. DEFAULT: "latin1" (potentially needed on Linux, optional but not hurting on windows)
formIndex	Single object: Index used to select column widths and NA values. To use a current / custom index, see the source code of <code>updateIndexes()</code> at https://github.com/brry/rwd/blob/master/R/updateIndexes.R . DEFAULT: <code>formatIndex</code>
quiet	Suppress subfunction name message? DEFAULT: FALSE through <code>rdwdquiet()</code>
...	Further arguments passed to <code>read.fwf()</code> or <code>readr::read_fwf()</code>

Value

data.frame with column names as per [formatIndex](#). "Q"-columns have "_parameter" appended to their name. A "Date" column has been added. NA-indicators have been processed into NAs.

Author(s)

Berry Boessenkool, <berry-b@gmx.de>, Oct 2019

## Not run: # Excluded from CRAN checks, but run in localtests

link <- selectDWD(id=10381, res="subdaily", var="standard_format", per="r")
file <- dataDWD(link, dir=localtestdir(), read=FALSE)
sf <- readDWD(file)

sf2 <- readDWD(file, fast=FALSE) # 20 secs!
stopifnot(all.equal(sf, sf2))

plot(sf$Date, sf$SHK, type="l")

# Plot all columns:
if(FALSE){ # not run in any automated testing
tmp <- tempfile(fileext=".pdf")
char2fact <- function(x)
{
  if(all(is.na(x))) return(rep(-9, len=length(x)))
  if(!is.numeric(x)) as.factor(x) else x
}
pdf(tmp, width=9)
par(mfrow=c(2,1),mar=c(2,3,2,0.1), mgp=c(3,0.7,0), las=1)
for(i in 3:ncol(sf)-1) plot(sf$Date, char2fact(sf[,i]), type="l", main=colnames(sf)[i], ylab="")
dev.off()
berryFunctions::openFile(tmp)
}

## End(Not run)
```

Description

Read climate meta info textfiles in zip folders downloaded with [dataDWD\(\)](#).

Usage

```
readMeta(file, progbar = TRUE, ...)
```

Arguments

file	Char (vector): name(s) of the zip file(s) downloaded with dataDWD() , e.g. "~/DWD-data/tageswerte_KL_02575_akt.zip"
progbar	Logical: present a progress bar with estimated remaining time? If missing and <code>length(file)==1</code> , progbar is internally set to FALSE. DEFAULT: TRUE
...	Further arguments passed to read.table()

Value

Invisible named list of data.frames; or a list of lists, if `length(file)>1`.

Author(s)

Berry Boessenkool, <berry-b@gmx.de>, 2016 + March 2019

See Also

Examples

```
# see dataDWD
```

readVars

Process data from the DWD CDC FTP Server

Description

Read climate variables (column meta data) from zip folders downloaded with [dataDWD\(\)](#). The metadata file "Metadaten_Parameter.*txt" in the zip folder file is read, processed and returned as a data.frame.

file can be a vector with several filenames.

Usage

```
readVars(file, params = dwdparams, progbar = TRUE)
```

Arguments

file	Char (vector): name(s) of the file(s) downloaded with dataDWD() , e.g. "~/DWD-data/tageswerte_KL_02575_akt.zip"
params	data.frame: Parameter explanations. DEFAULT: dwdparams
progbar	Logical: present a progress bar with estimated remaining time? If missing and <code>length(file)==1</code> , progbar is internally set to FALSE. DEFAULT: TRUE

Value

data.frame of the desired dataset, or a named list of data.frames if length(file) > 1.

Author(s)

Berry Boessenkool, <berry-b@gmx.de>, Jun 2018

rowDisplay

Create leaflet map popup from data.frame rows

Description

Create display character string for leaflet map popup from data.frame rows. This function is not exported, as it is only internally useful. A generic version is available in [berryFunctions::popleaf\(\)](#).

Usage

```
rowDisplay(x)
```

Arguments

x data.frame with colnames

Value

Vector of character strings, one for each row in x.

Author(s)

Berry Boessenkool, <berry-b@gmx.de>, Feb 2017

See Also

[geoIndex](#)

runLocalTests	<i>run local tests of rdwd</i>
---------------	--------------------------------

Description

Run rdwd tests on local machine. Due to time-intensive data downloads, these tests are not run automatically on CRAN.

Usage

```
runLocalTests(
  dir_data = localtestdir(),
  dir_exmpl = localtestdir(folder = "misc/ExampleTests"),
  fast = FALSE,
  devcheck = !fast,
  radar = !fast,
  all_Potsdam_files = !fast,
  index = !fast,
  indexfast = fast,
  examples = !fast,
  quiet = rdwdquiet()
)
```

Arguments

dir_data	Reusable data location. Preferably not under version control. DEFAULT: localtestdir()
dir_exmpl	Reusable example location. DEFAULT: localtestdir(folder="misc/ExampleTests")
fast	Exclude many tests? DEFAULT: FALSE
devcheck	Run devtools::check()? DEFAULT: !fast
radar	Test reading radar example files. DEFAULT: !fast
all_Potsdam_files	Read all (ca 60) files for Potsdam? Re-downloads if files are older than 24 hours. Reduce test time a lot by setting this to FALSE. DEFAULT: !fast
index	Run checkIndex() ? DEFAULT: !fast
indexfast	fast option passed to checkIndex() . DEFAULT: !fast
examples	Run Examples (including donttest sections) DEFAULT: !fast
quiet	Suppress progress messages? DEFAULT: FALSE through rdwdquiet()

Value

Time taken to run tests in minutes

Author(s)

Berry Boessenkool, <berry-b@gmx.de>, Apr-Oct 2019

[localtestdir\(\)](#)

selectDWD

Select data from the DWD CDC FTP Server

Description

Select files for downloading with [dataDWD\(\)](#).

The available folders with datasets are listed at <https://bookdown.org/brry/rwd/available-datasets.html>. To use an updated index (if necessary), see <https://bookdown.org/brry/rwd/fileindex.html>.

All arguments (except for `mindex`, `findex` and `base`) can be a vector and will be recycled to the maximum length of all arguments. If that length > 1, the output is a list of filenames (or vector if `outvec=TRUE`).

If station name is given, but `id` is empty (`""`), `id` is inferred via [findID\(\)](#) using `mindex`. If `res/var/per` are given and valid (existing in `findex`), they are pasted together to form a **path**. Here is an overview of the behavior in each case of availability:

case	<code>id</code>	<code>path</code>	output
1	<code>""</code>	<code>""</code>	base (and some warnings)
2	<code>"xx"</code>	<code>""</code>	All file names (across paths) for station id
3	<code>""</code>	<code>"xx"</code>	The zip file names at path
4	<code>"xx"</code>	<code>"xx"</code>	Regular single data file name

For case 2, you can explicitly set `res=""`, `var=""`, `per=""` to avoid the default interactive selection.

For case 3 and 4 (**path** given), you can set `meta=TRUE`. Then `selectDWD` will return the name of the station description txt file at **path**. This is why case 3 with the default `meta=FALSE` only returns the data file names (ending in `.zip`) and not the description and `Beschreibung` txt/pdf files. Open those in a browser with

```
pdfpath <- grep("daily/kl/h.*DESCRIPTION", fileIndex$path, value=TRUE)
browseURL(paste0(dwdbase, "/", pdfpath))
```

Let me know if besides `meta`, `pdf` is needed for automated opening.

Usage

```
selectDWD(
  name = "",
  res = NA,
```

```

var = NA,
per = NA,
base = dwdbase,
outvec = any(per %in% c("rh", "hr")),
findex = fileIndex,
remove_dupli = TRUE,
current = FALSE,
id = findID(name, exactmatch = exactmatch, mindex = mindex, quiet = quiet),
mindex = metaIndex,
exactmatch = TRUE,
meta = FALSE,
meta_txt_only = TRUE,
quiet = rdwdquiet(),
...
)

```

Arguments

name	Char: station name(s) passed to <code>findID()</code> , along with <code>exactmatch</code> and <code>mindex</code> . All 3 arguments are ignored if <code>id</code> is given. DEFAULT: ""
res	Char: temporal resolution available at base, usually one of <code>c("hourly", "daily", "monthly")</code> , see section 'Description' above. <code>res/var/per</code> together form the path . DEFAULT: NA for interactive selection
var	Char: weather variable of interest, like e.g. "air_temperature", "cloudiness", "precipitation", "soil_temperature", "solar", "kl", "more_precip" See above and in <code>fileIndex</code> . DEFAULT: NA for interactive selection
per	Char: desired time period . One of "recent" (data from the last year, up to date usually within a few days) or "historical" (long time series). Can be abbreviated (if the first letter is "r" or "h", full names are used). To get both datasets, use <code>per="hr"</code> or <code>per="rh"</code> (and <code>outvec=TRUE</code>). <code>per</code> is set to "" if <code>var=="solar"</code> . DEFAULT: NA for interactive selection
base	Single char: main directory of DWD ftp server. Must be the same base used to create <code>findex</code> . DEFAULT: <code>dwdbase</code>
outvec	Single logical: if path or ID length > 1, instead of a list, return a vector? (via <code>unlist()</code>). DEFAULT: <code>per %in% c("rh", "hr")</code>
findex	Single object: Index used to select filename, as returned by <code>createIndex()</code> . To use a current / custom index, see https://bookdown.org/brry/rdwd/fileindex.html . DEFAULT: <code>fileIndex</code>
remove_dupli	Logical: Remove duplicate entries in the <code>fileIndex</code> ? If duplicates are found, a warning will be issued, unless <code>quiet=TRUE</code> . The DWD updates files on the server quite often and sometimes misses removing the old files, leading to duplicates, usually with differences only in the date range. A semi-current (manually updated) list of duplicates is on github . Before reporting, run <code>updateRdwd()</code> to see if <code>fileIndex</code> has been updated. I email the DWD about duplicates when I find them, they usually fix it soon. If <code>remove_dupli=TRUE</code> , only the file with the longer timespan will be kept.

	This is selected according to filename, which is not very reliable, hence manual checking is recommended. DEFAULT: TRUE
current	Single logical for case 3/4 with given path: instead of <code>findex</code> , use a list of the currently available files at <code>base/res/var/per</code> ? This will call <code>indexFTP()</code> , thus requires availability of the <code>Rcurl</code> package. DEFAULT: FALSE
id	Char/Number: station ID with or without leading zeros, e.g. "00614" or 614. Is internally converted to an integer, because some DWD meta data files also contain no leading zeros. DEFAULT: <code>findID(name, exactmatch, mindex)</code>
mindex	Single object: Index with metadata passed to <code>findID()</code> . DEFAULT: <code>metaIndex</code>
exactmatch	Logical passed to <code>findID()</code> : match name with <code>==</code> ? Else with <code>grepl()</code> . DEFAULT: TRUE
meta	Logical: return metadata txt file name instead of climate data zip file? Relevant only in case 4 (path and id given) and case 3 for <code>res="multi_annual"</code> . See <code>metaIndex</code> for a compilation of all <code>metaData</code> files. DEFAULT: FALSE
meta_txt_only	Logical: if meta, only return .txt files, not the pdf and html files? DEFAULT: TRUE
quiet	Suppress id length warnings? DEFAULT: FALSE through <code>rdwdquiet()</code>
...	Further arguments passed to <code>indexFTP()</code> if <code>current=TRUE</code> , except folder and base.

Value

Character string with file path and name(s) in the format "base/res/var/per/filename.zip"

Author(s)

Berry Boessenkool, <berry-b@gmx.de>, Oct 2016

See Also

`dataDWD()`, `metaIndex`, <https://bookdown.org/brry/rdwd>

Examples

```
# Give weather station name (must be existing in metaIndex):
selectDWD("Potsdam", res="daily", var="kl", per="historical")

# all files for all stations matching "Koeln":
selectDWD("Koeln", res="", var="", per="", exactmatch=FALSE)
findID("Koeln", FALSE)

## Not run: # Excluded from CRAN checks to save time

# selectDWD("Potsdam") # interactive selection of res/var/per

# directly give station ID, can also be id="00386" :
selectDWD(id=386, res="daily", var="kl", per="historical")
```

```

# period can be abbreviated:
selectDWD(id="00386", res="daily", var="kl", per="h")
selectDWD(id="00386", res="daily", var="kl", per="h", meta=TRUE)

# vectorizable:
selectDWD(id="01050", res="daily", var="kl", per="rh") # list if outvec=F
selectDWD(id="01050", res=c("daily","monthly"), var="kl", per="r")
# vectorization gives not the outer product, but elementwise comparison:
selectDWD(id="01050", res=c("daily","monthly"), var="kl", per="hr")

# all zip files in all paths matching id:
selectDWD(id=c(1050, 386), res="", var="", per="")
# all zip files in a given path (if ID is empty):
head( selectDWD(id="", res="daily", var="kl", per="recent") )

## End(Not run)

```

updateRdwd

Update rdwd development version

Description

Update rdwd to the latest development version on github, if necessary. If the version number or date is larger on github, `remotes::install_github()` will be called.

Usage

```

updateRdwd(
  pack = "rdwd",
  user = "brry",
  vignette = TRUE,
  quiet = rdwdquiet(),
  ...
)

```

Arguments

pack	Name of (already installed) package. DEFAULT: "rdwd"
user	Github username. repo will then be user/pack. DEFAULT: "brry"
vignette	build_vignettes in <code>remotes::install_github()</code> ? DEFAULT: TRUE
quiet	Suppress version messages and <code>remotes::install</code> output? DEFAULT: FALSE through <code>rdwdquiet()</code>
...	Further arguments passed to <code>remotes::install_github()</code>

Value

data.frame with version information

Author(s)

Berry Boessenkool, <berry-b@gmx.de>, Nov 2019
