Package 'rtsplot'

March 29, 2020

Type Package

Title Time Series Plot

Version 0.1.3

Description A fast and elegant time series visualization package. In addition to the standard R plot types, this package supports candle sticks, open-high-low-close, and volume plots. Useful for visualizing any time series data, e.g., stock prices and technical indicators.

License MIT + file LICENSE

Imports xts, quantmod, zoo, RColorBrewer

Suggests TTR

R topics documented:

`register.theme` *Theme*

Description

Setup theme

Usage

```
register.theme(
  grid.color = "gray90",
  colors = "Set1",
  col.border = "black",
  col.up = "green",
  col.dn = "red",
  col.x.highlight = "orange",
  col.y.highlight = "orange",
  cex = 1,
  legend.bg.col = grDevices::adjustcolor("white", 200/255)
)

rtsplot.theme()

rtsplot.theme.set(...)

rtsplot.colors(n)
```

Arguments

grid.color	color for grid lines, **defaults to 'gray90'**
colors	RColorBrewer set to generate colors, **defaults to "Set1" in RColorBrewer**
col.border	border color for drawing candles, **defaults to 'black'**
col.up	up color for drawing candles, **defaults to 'green'**
col.dn	down color for drawing candles, **defaults to 'red'**
col.x.highlight	color for highlighting along x axis, **defaults to 'orange'**
col.y.highlight	color for highlighting along y axis, **defaults to 'orange'**
cex	font size, **defaults to 1**
legend.bg.col	background legend color, **defaults to grDevices::adjustcolor('white', 200/255)**
...	additional settings
n	number of colors to generate

Value

None

---

rtsplot *'rtsplot' - Time series plot with base R Graphics.*

Description

Plot time series data with base R Graphics.

The 'rtsplot' package is **fast** time series plot package with base R Graphics.

Usage

```
rtsplot(
  y,
  main = NULL,
  plotX = TRUE,
  LeftMargin = 0,
  grid = "xy",
  x.highlight = NULL,
  y.highlight = NULL,
  y.highlight.col = NULL,
  las = 1,
  type = "l",
  xlab = "",
  ylab = "",
  ylim = NULL,
```

```
  log = "",
  skip.breaks = FALSE,
  ...
)
```

Arguments

y	xts object
main	plot title
plotX	flag to display X axis
LeftMargin	to plot second Y axis, set LeftMargin=3, **defaults to 0**
grid	which grid lines to draw, **defaults to 'xy'**
x.highlight	segments to highlight along X axis, **defaults to NULL**
y.highlight	segments to highlight along Y axis, **defaults to NULL**
y.highlight.col	color to highlight segments Y axis, **defaults to NULL**
las	rotation of Y axis labels, **defaults to 1**, for more info see par
type	plot type, **defaults to 'l'**, for more info see plot also support 'ohlc', 'hl', 'candle', 'volume' types
xlab	X label, **defaults to ''**, for more info see plot
ylab	Y label, **defaults to ''**, for more info see plot
ylim	range on Y values, **defaults to NULL**
log	log scale x, y, xy axes, **defaults to ''**
skip.breaks	flag to skip plotting missing date/times (i.e. nights and weekends), **defaults to FALSE**
...	additional parameters to the plot

Value

nothing

Examples

```
# generate time series data
y = rtsplot.fake.stock.data(1000)
symbol = 'Test'

sma = TTR::SMA(y, 250)
rsi = TTR::RSI(y, 20)

# plot candles and RSI charts
layout(c(1,1,1,2))
cols = rtsplot.colors(2)

rtsplot(y, type = 'l', plotX = FALSE, col=cols[1],lwd=1.5)
rtsplot.lines(sma, col=cols[2], lwd=1.5)
```

```
rtsplot.legend(c(symbol, 'SMA(250)'), cols[1:2], list(y,sma))

# plot rsi
rtsplot(rsi, type = 'l', ylim=c(0,100),
y.highlight = c(c(0,30), c(70,100)),
y.highlight.col = grDevices::adjustcolor(c('green','red'), 50/255)
)
rtsplot.legend('RSI(20)', 'black', rsi)

y = rtsplot.fake.stock.data(1000)
symbol = 'SPY'

 # simple example
 highlight = which(y < 10)

 # plot
 layout(1)
 rtsplot.theme.set(col.x.highlight=grDevices::adjustcolor('orange', 200/255))

 rtsplot(y, type = 'l', main = symbol, x.highlight = highlight)

 # 'skip.breaks' example with daily data
 y = rtsplot.fake.stock.data(10, remove.non.trading = TRUE)

 layout(1:2)
 rtsplot(y, type='b')
rtsplot.legend('skip.breaks=FALSE', text.col='red')
 rtsplot(y, type='b', skip.breaks=TRUE)
rtsplot.legend('skip.breaks=TRUE', text.col='red')

 # 'skip.breaks' example with intra-day data
 y = rtsplot.fake.stock.data(5*24*60, period = 'minute', remove.non.trading = TRUE)

 layout(1:2)
 rtsplot(y, type='l')
rtsplot.legend('skip.breaks=FALSE', text.col='red')
 rtsplot(y, type='l', skip.breaks=TRUE)
rtsplot.legend('skip.breaks=TRUE', text.col='red')
```

`rtsplot.candle` *Create Candle Plot*

Description

Plot candles if dx is sufficient otherwise ohlc or bars

Usage

```
rtsplot.candle(
  y,
  col = rtsplot.candle.col(y),
  border = rtsplot.theme()$col.border
)
```

Arguments

y	xts object
col	color for bars, **defaults to rtsplot.candle.col**
border	border color, **defaults to rtsplot.theme()$col.border**

Value

nothing

Examples

```
y = rtsplot.fake.stock.data(50, ohlc=TRUE)
symbol = 'SPY'

 # plot
 layout(1)
 rtsplot(y, type = 'n')
 rtsplot.candle(y)
rtsplot.legend(symbol, 'black', y)
```

---

rtsplot.candle.col *Bar Colors for Candle and Volume plots*

Description

Bar Colors for Candle and Volume plots

Usage

```
rtsplot.candle.col(y)

rtsplot.volume.col(y)
```

Arguments

y	xts object

Value

colors

`rtsplot.corner.label` *Plot corner label*

Description

Plot corner label, based on the [text at the upper left corner outside of the plot region](http://r.789695.n4.nabble.com/text-at-the-upper-left-corner-outside-of-the-plot-region-td885675.html)

Usage

```
rtsplot.corner.label(
  label = NULL,
  col = "black",
  x = -1,
  y = 1,
  xoffset = NA,
  yoffset = NA,
  space = c("plot", "figure"),
  cex = 1,
  border = NA
)
```

Arguments

`label`	label
`col`	label color
`x`	x location, **defaults to -1**
`y`	y location, **defaults to 1**
`xoffset`	x offset, **defaults to NA**
`yoffset`	y offset, **defaults to NA**
`space`	coordinate space, can be "plot" or "figure", **defaults to "plot"**
`cex`	font size, **defaults to 1**
`border`	border color, **defaults to NA - no color**

Value

nothing

Examples

```
rtsplot.theme.set(legend.bg.col=grDevices::adjustcolor('orange', 200/255))
plot(rnorm(20), rnorm(20))

rtsplot.corner.label('test1', y=-1, space='figure')
rtsplot.corner.label('test2', y=1, space='figure')
```

```
rtsplot.corner.label('test3', x=1, space='figure')
rtsplot.corner.label('test4', x=1, y=-1, space='figure')
rtsplot.theme.set(legend.bg.col=grDevices::adjustcolor('white', 50/255))
```

`rtsplot.fake.stock.data` *Generate fake stock data*

Description

Generate fake stock data for use in rtsplot examples

Usage

```
rtsplot.fake.stock.data(
  n,
  y0 = 10,
  stdev = 0.1,
  ohlc = FALSE,
  method = c("normal", "adhoc"),
  period = c("day", "minute"),
  remove.non.trading = FALSE
)
```

Arguments

`n`	number of points to generate
`y0`	starting price, **defaults to 10**
`stdev`	standard deviation, **defaults to 0.1**
`ohlc`	generate ohlc data, **defaults to FALSE**
`method`	method to generate fake stock data, **defaults to 'normal'** two methods are implemented: * 'normal' - generate fake stock data assuming returns are normally distributed with zero drift * 'uniform' - generate fake stock data assuming returns are uniformly distributed with zero drift
`period`	frequency to generate fake stock data, (possible values: "day", "minute"), **defaults to "day"**
`remove.non.trading`	flag to remove non trading periods(i.e. weekends and non-trading hours). Note, this flag likely will cause function return less than 'n' observation, **defaults to FALSE**

Value

`xts` object with fake stock data

Examples

```
rtsplot.fake.stock.data(10)
```

`rtsplot.format` *Format numbers using 1000 separator*

Description

Format numbers using 1000 separator

Usage

```
rtsplot.format(temp, nround = 2, sprefix = "", eprefix = "")
```

Arguments

`temp`	numbers
`nround`	number of rounding digits, **defaults to '2'**
`sprefix`	start prefix string, **defaults to ''**
`eprefix`	end postfix string, **defaults to ''**

Value

numbers formatted using 1000 separator

`rtsplot.grid` *Add grid to time series plot*

Description

Add grid to time series plot

Usage

```
rtsplot.grid(grid, xaxis.ticks, col = rtsplot.theme()$grid.color)
```

Arguments

`grid`	which grid lines to draw, **defaults to 'xy'**
`xaxis.ticks`	location of x axis ticks
`col`	grid color, **defaults to rtsplot.theme()$grid.color**

Value

nothing

rtsplot.hl *Create HL Plot*

Description

Create HL Plot

Usage

```
rtsplot.hl(y, col = rtsplot.volume.col(y), border = rtsplot.theme()$col.border)
```

Arguments

y	xts object
col	color for bars, **defaults to rtsplot.volume.col**
border	border color, **defaults to rtsplot.theme()$col.border**

Value

nothing

Examples

```
y = rtsplot.fake.stock.data(50, ohlc=TRUE)
symbol = 'SPY'

 # plot
 layout(1)
 rtsplot(y, type = 'n')
 rtsplot.hl(y)
rtsplot.legend(symbol, 'black', y)
```

rtsplot.layout *Create layout*

Description

Create layout

Usage

```
rtsplot.layout(ilayout, delim = ",")
```

Arguments

ilayout	matrix stored as a string
delim	delimiter, **defaults to ','**

Value

nothing

---

rtsplot.legend *Plot legend - shortcut to the* legend *function*

Description

Plot legend - shortcut to the legend function

Usage

```
rtsplot.legend(
  labels,
  fill = NULL,
  lastobs = NULL,
  x = "topleft",
  merge = FALSE,
  bty = "n",
  border = NA,
  yformat = rtsplot.format,
  cex = 1,
  ...
)
```

Arguments

labels	legend labels
fill	fill colors, **defaults to NULL**
lastobs	list of last observations, **defaults to NULL**
x	location of legend, **defaults to 'topleft'**
merge	merge, **defaults to FALSE**, see legend function for more info
bty	box, **defaults to 'n'**, see legend function for more info
border	border color, **defaults to NA - no color**
yformat	format Y values function, **defaults to** rtsplot.format
cex	font size, **defaults to 1**
...	other parameters to legend, see legend function for more info

Value

nothing

Examples

```
y = rtsplot.fake.stock.data(1000)
symbol = 'SPY'

 # plot
 layout(1)
 rtsplot(y, type = 'l', col='black')
rtsplot.legend(symbol, 'black', y)
```

`rtsplot.lines` *Add lines to time series plot*

Description

Add lines to time series plot

Usage

```
rtsplot.lines(y, type = "l", col = graphics::par("col"), ...)
```

Arguments

`y`	`xts` object
`type`	line type, **defaults to 'l'**, for more info see `lines`
`col`	color, **defaults to par('col')**
`...`	additional parameters to the `lines`

Value

nothing

Examples

```
y = rtsplot.fake.stock.data(1000)
symbol = 'SPY'

 # moving average
sma = TTR::SMA(y, 250)

 # plot
 layout(1)
 rtsplot(y, type = 'l', col='black')
 rtsplot.lines(sma, col='blue', lwd=1.5)
rtsplot.legend(c(symbol, 'SMA(250)'), 'black,blue', list(y,sma))
```

rtsplot.matplot *matplot version for xts object*

Description

matplot version for xts object

Usage

```
rtsplot.matplot(
  y,
  dates = NULL,
  ylim = NULL,
  type = "l",
  cols = rtsplot.colors(ncol(y)),
  ...
)
```

Arguments

y	xts object
dates	subset of dates**defaults to NULL**
ylim	range on Y values, **defaults to NULL**
type	plot type, **defaults to 'l'**, see plot for details
cols	colors
...	additional parameters to the matplot

Value

nothing

rtsplot.ohlc *Create OHLC Plot*

Description

Plot ohlc if dx is sufficient otherwise bars

Usage

```
rtsplot.ohlc(y, col = rtsplot.theme()$col.border)
```

Arguments

y	xts object
col	color for bars, **defaults to rtsplot.theme()$col.border**

Value

nothing

Examples

```
y = rtsplot.fake.stock.data(50, ohlc=TRUE)
symbol = 'SPY'

 # plot
 layout(1)
 rtsplot(y, type = 'n')
 rtsplot.ohlc(y)
rtsplot.legend(symbol, 'black', y)
```

---

rtsplot.scale.volume *Scale volume*

Description

Scale volume

Usage

```
rtsplot.scale.volume(y)
```

Arguments

y	xts object

Value

adjusted y object

rtsplot.stacked *Create Stacked plot*

Description

Create Stacked plot

Usage

```
rtsplot.stacked(
  x,
  y,
  xlab = "",
  cols = rtsplot.colors(ncol(y)),
  type = c("l", "s"),
  flip.legend = FALSE,
  ...
)
```

Arguments

x	dates object
y	matrix with weights
xlab	X label, **defaults to ”**, for more info see plot
cols	colors, **defaults to colors** rtsplot.theme
type	plot type: lines, step stairs c('l','s')
flip.legend	flag to reverse legend order, **defaults to FALSE**
...	additional parameters to the plot

Value

nothing

rtsplot.text *Add text to time series plot*

Description

Add text to time series plot

Usage

```
rtsplot.text(y, ...)
```

Arguments

y	xts object
...	additional parameters to the lines

Value

nothing

Examples

```
y = rtsplot.fake.stock.data(1000)
symbol = 'SPY'

 # plot
 layout(1)
 rtsplot(y, type = 'l', col='black')
 rtsplot.text(y[100], 'Text', col='red')
rtsplot.legend(symbol, 'black', y)
```

---

rtsplot.volume *Plot volume*

Description

Plot volume

Usage

```
rtsplot.volume(
  y,
  col = rtsplot.volume.col(y),
  border = rtsplot.theme()$col.border
)
```

Arguments

y	xts object
col	color for volume bars
border	color for volume bars border

Value

nothing

rtsplot.x.highlight *Highlight vertical segments*

Description

Highlight vertical segments

Usage

```
rtsplot.x.highlight(y, highlight, col = rtsplot.theme()$col.x.highlight)
```

Arguments

y	xts object
highlight	segments to highlight along X axis
col	highlight color, **defaults to rtsplot.control$col.x.highlight**

Value

nothing

rtsplot.y.highlight *Highlight horizontal segments*

Description

Highlight horizontal segments

Usage

```
rtsplot.y.highlight(highlight, col = rtsplot.theme()$col.y.highlight)
```

Arguments

highlight	segments to highlight along Y axis
col	highlight color, **defaults to rtsplot.control$col.y.highlight**

Value

nothing

Examples

```
# generate time series data
y = rtsplot.fake.stock.data(1000)

rsi = TTR::RSI(y, 20)

#set up two regions for graphs candlestick price data on top 2/3 of the plot
#and rsi on the bottom 1/3 of the plot
layout(c(1,1,2))

rtsplot(y, type = 'line', plotX = FALSE)
  rtsplot.legend('SPY', 'grey70', y)

rtsplot(rsi, type = 'l')

col = grDevices::adjustcolor(c('green','red'), 80/255)
rtsplot.y.highlight(col=col[1], highlight=c(50,100))
rtsplot.y.highlight(col=col[2], highlight=c(0,50))

abline(h = 50, col = 'gray20')

rtsplot.legend('RSI(20)', 'black', rsi)
```

`rtsplot2Y` *Plot time series with second Y axis*

Description

Detailed discussion for validity of dual Y axis at [Dual axes time series plots may be ok sometimes after all](http://freerangestats.info/blog/2016/08/18/dualaxes)

Usage

```
rtsplot2Y(y, las = 1, type = "l", col.axis = "red", ylim = NULL, log = "", ...)
```

Arguments

`y`	`xts` object
`las`	rotation of Y axis labels, **defaults to 1**, for more info see `par`
`type`	plot type, **defaults to 'l'**, for more info see `plot` also support 'ohlc', 'hl', 'candle', 'volume' types
`col.axis`	axis color, **defaults to 'red'**
`ylim`	range on Y values, **defaults to NULL**
`log`	log scale x, y, xy axes, **defaults to ''**
`...`	additional parameters to the `plot`

Value

nothing

Examples

```
# generate time series data
y = rtsplot.fake.stock.data(1000)
symbol = 'SPY'

y1 = rtsplot.fake.stock.data(1000, 100)
symbol = 'IBM'

 # two Y axis example
 # to plot second Y axis, free some space on left side, set LeftMargin=3
 layout(1)
 cols = c('black', 'red')

 rtsplot(y, type = 'l', LeftMargin=3, col=cols[1])

 rtsplot2Y(y1, type='l', las=1, col=cols[2], col.axis=cols[2])

 rtsplot.legend('SPY(rhs),IBM(lhs)', cols, list(y,y1))
```
